

Lead Service Line Replacement Plan

Langely Air Force Base
(PWSID NUMBER) VA3650350
October 1, 2024

New Plan Revised Plan Date:

1. Plan Certification

I have verified and certify the information listed in this Plan is true and accurate to the best of my knowledge and belief:

Plan Preparer Signature

10/1/24

Brent Tippey

Plan Preparer Name (Print)

Vice-President/HDR, Inc.

Title

Waterworks Administrative Representative Signature

Date

Waterworks Administrative Representative Name (Print)

Title

2. General Water System Information

System Name: JBLE - Langely Air Force Base	PWSID: VA 3650350
Total Number of Service Connections:	
Number of Lead Service Lines: 0	
Number of Lead Status Unknown Service Lines: 33	
Number of Galvanized Requiring Replacement Service Lines: 13	
Number of Non-lead Service Lines: 2464	
Total Population Served: 10,886	

2a. Contact Information

<u>System owner</u> contact information:	
Name: Jeffery R, Saunders	Title: GS-12
Phone: (757) 764.1141	Email: Jeffrey.saunders.9@us.af.mil
<u>Licensed operator</u> contact information	
Name:	Title:
Phone:	Email:
<u>Plan preparer</u> contact information	
Name: Brent Tippey	Title: Vice President /HDR, Inc.
Phone: (859) 221.5555	Email: Brent.Tippey@hdrinc.com

This template meets the requirements for a lead service line replacement plan in accordance with 40 CFR § 141.84 b and the Lead and Copper Rule Revisions. The Lead and Copper Rule Improvements propose to require a lead service line replacement plan in 2027; however, VDH ODW recommends that community and nontransient noncommunity (NTNC) waterworks with one or more lead, galvanized requiring replacement, or lead status unknown service lines should prepare a lead service line replacement plan for October 2024. The purpose of the plan is to prepare the waterworks for the eventuality that a lead service line will need replacement, even if the replacement is not planned or scheduled.

This plan should be updated when new information becomes available regarding the replacements, identification of lead service lines, changing priorities, contract expirations, or changes in staff.

3. Responsible Parties

List names, titles, and details for the following:

- | |
|---|
| 1. Creating and maintaining the Lead Service Line Replacement Plan: Jeffery R, Saunders |
| 2. Identification of lead service lines: Jeffery R, Saunders |
| 3. Maintenance of service line inventory: Jeffery R, Saunders |
| 4. Construction oversight: TBD |
| 5. Funding: AFCEC |
| 6. Public Outreach Coordinator: TBD |
| 7. Maintaining the online inventory updates: Jeffery R, Saunders |
| 8. Resubmission of the Lead Service Line Replacement Plan: Jeffery R, Saunders |
| 9. Other: |

4. Service Line Inventory Development and Maintenance

Strategy for identifying service lines of unknown materials (40 CFR 141.84(b)(1))

Check all applicable boxes. When completed, include completion date.

We do not have service lines of unknown material within our water system's service area

Type of Review	Completion Date
<input checked="" type="checkbox"/> Building and plumbing codes	September 1, 2024
<input type="checkbox"/> County and municipal ordinances	
<input type="checkbox"/> Virginia Lead Chronology (posted on ODW's website)	
<input type="checkbox"/> Historical building records and permits on each service connection	
<input checked="" type="checkbox"/> Distribution system maps and record drawings	August 1, 2024
<input type="checkbox"/> Most recent approved LCR material survey	
<input checked="" type="checkbox"/> Ongoing updating of service line materials during normal operations	Ongoing
<input checked="" type="checkbox"/> Capital improvement plans and/or master plans for distribution system development	August 1, 2024
<input type="checkbox"/> Utility records including meter installation records, customer complaint investigations and field activity records	
<input type="checkbox"/> Utility construction standards, standard details, and standard operating procedures	
<input checked="" type="checkbox"/> Other documentation which indicates and/or confirms the location of lead service lines: description of documentation	Ongoing
<input type="checkbox"/> Community survey	
<input type="checkbox"/> Contacts within the water system, municipal office, or other local officials	
<input type="checkbox"/> Survey results from area plumbers	
<input type="checkbox"/> Documented interviews of residents - letters, phone survey, personal contact, etc.	
<input checked="" type="checkbox"/> Visual inspection	Ongoing

<input checked="" type="checkbox"/> Customer self-identification	
<input checked="" type="checkbox"/> CCTV Inspection	
<input checked="" type="checkbox"/> Scratch Test	
<input type="checkbox"/> Lead solder test	
<input checked="" type="checkbox"/> Excavation – Vacuum	
<input checked="" type="checkbox"/> Excavation – Mechanical	
<input checked="" type="checkbox"/> Water quality sampling – Service line sampling or Sequential Tap sampling	
<input type="checkbox"/> Predictive modeling	
<input type="checkbox"/> Other: (describe)	

5. Replacement Schedule Development and Replacement Considerations

5a. Methods used to identify the prioritization of lead service line replacements (use numbers to indicate the level of priority, with “1” being the highest priority. Indicate items not used with “NA”.) (40 CFR § 141.84(b)(6))

<p><input type="checkbox"/> _1_ Disadvantaged consumers*</p> <p><input type="checkbox"/> _1_ Known lead service lines*</p> <p><input type="checkbox"/> _1_ Sensitive populations*</p> <p><input type="checkbox"/> _1_ Proximity to high lead results*</p> <p><input type="checkbox"/> Previous partial replacement*</p> <p><input type="checkbox"/> Areas that receive many water quality complaints*</p> <p><input type="checkbox"/> Overburdened Communities*</p> <p><input type="checkbox"/> _1_ Licensed childcare centers*</p> <p><input type="checkbox"/> Areas with no service lines of unknown material</p> <p><input type="checkbox"/> _3_ Areas where all service lines are of unknown material</p> <p><input type="checkbox"/> _4_ Areas where pipe replacements are already being conducted</p> <p><input type="checkbox"/> _4_ Previous participation in PbCu sampling</p> <p><input type="checkbox"/> _1_ Areas with high density of children</p> <p>*Prioritization strategy must include, but is not limited to, known lead service lines and lead service line replacement for disadvantaged consumers and sensitive populations.</p>	<p><input type="checkbox"/> Age of current water main</p> <p><input type="checkbox"/> Proximity to other known contaminants</p> <p><input type="checkbox"/> System pressure grade line</p> <p><input type="checkbox"/> Ownership</p> <p><input type="checkbox"/> LSLs close to interconnections with a wholesaler which utilizes corrosion control treatment</p> <p><input type="checkbox"/> Areas of source water or treatment changes</p> <p><input type="checkbox"/> Areas where all residents have agreed to participate in the program</p> <p><input type="checkbox"/> _1_ Service lines containing lead only on the water system side</p> <p><input type="checkbox"/> _1_ Service lines containing lead only on the property owner side</p> <p><input type="checkbox"/> Predictive modeling results</p>
---	---

Infants, young children, and pregnant women are the most vulnerable to lead exposure.

5b. Explanation of how the system is prioritizing replacement locations using the methods identified above and how the schedule will be implemented. Example: The prioritization of the replacements is focused on identifying areas with sensitive populations such as daycares and preschools. Past sampling events have shown that these areas also have high lead results. By focusing replacement on these areas first, we are addressing the areas where lead contamination has the most adverse impacts on the health of those who drink the water.

Prioritization is based upon Air Force Lead Service Line playbook criteria. Criteria is provided in Appendix but is summarized as follows:

Priority 1 – Known Lead Service lines with priority to sensitive populations and disadvantaged communities

Priority 2 – Known GRR Service lines for sensitive populations, homes with young children and disadvantaged communities

Priority 3 – Other Known GRR service lines

Priority 4 – Unknown facilities serving sensitive populations and locations where companion projects are underway.

Priority 5 – Projects found through investigation of unknowns and new discoveries

For the prioritized LSL replacement plan, please see Appendix C - Prioritized LSL Replacement Plan.

5c. Coordination with Property Owners

What portion of the service line is owned by the waterworks?	<input type="checkbox"/> The waterworks owns the entire service line (main to house)	<input type="checkbox"/> The waterworks owns a portion of the service line (main to curb stop or meter)	<input type="checkbox"/> The waterworks does not own any portion of the service line
--	--	---	--

If the waterworks does not own the entire service line, will the community create an ordinance which mandates the replacement of all lead service lines, regardless of ownership? Yes No

How will the system conduct public outreach regarding its lead service line replacement program? Provide links to all publicly available materials.

Door-to-door conversations, Door hangers, E-mails, Public Notices at Central AFB facilities, base entry/security facilities, public message boards and other locations where information is currently disseminated.

How will the system solicit property owner/customer’s approval to replace lead service lines?

Air force base – no private property. Privatized base housing has a legal agreement related to replacing lead services.

Provide a summary of any legal requirements or anticipated obstacles. For example: prior to replacing the property-owner portion of a lead service line, a contract between the water system, contractor and property-owner must be signed and executed through the following process.

NA.

In the event of a property owner/customer’s refusal to replace the service line the water system will:

- Document the incident.
- Continue to contact the property owner/customer each year for participation and continue to document all outreach efforts.
- When applicable, inform the property owner/customer refused to replace their portion of the lead service line; and therefore, the lead service line in its entirety must remain.

5d. Coordination with Municipalities & VDOT

How will the water system work with local municipalities in our service area and VDOT to coordinate replacement efforts to minimize costs, impacts on roads, and neighborhood disturbances?

- By meeting with municipalities on a monthly bi-monthly basis
- By meeting with VDOT on a monthly bi-monthly basis
- By participating in public meetings
- By attending council meetings
- By developing an outreach program with the municipalities/local authorities
- Other: Not applicable for Air Force Base. Property and roads owned by military.

5e. Disposal of Lead Service Lines

How will the water system take steps to make sure all lead service lines removed are disposed of properly?

- By ensuring that the contractors remove them to an appropriate facility/scrapyard for disposal.
- By keeping records of the scrap sale ticket and receipts on file for our records.

5f. Emergency Replacement

What steps will the water system take in the event an emergency replacement is necessary?

- By having materials, staff resources, and procedures in place to replace the service line.
- By replacing the line as part of the emergency repair.
- By documenting the service line materials if they are made known and replacing at a later date.

6. Financing

6a. Lead Service Line Replacement Financing (40 CFR § 141.84(b)(7))

Will the water system need to have approval from another agency or governing body prior to beginning replacements (due to budgetary issues)?

- Yes
- No

If yes, explain:

1. **Follow funding requirements per Air Force Instruction 32-1020 PLANNING AND PROGRAMMING BUILT INFRASTRUCTURE PROJECTS and the Air Force Comprehensive Asset Management Plan (AFCAMP) Business Rules.**
2. **For replacements involving privatized housing (PH) units, follow contract terms and work with the Base Housing Office.**
3. **For replacements where tenant units may be financially responsible for LSL replacement, ensure tenant completes the replacement and reports status to the installation LSL Inventory program manager.**

List financial approvals, if any, that will need to be obtained before beginning replacements:

Air Force budget approval

How will replacements be funded?

Air Force funding or privatized housing contractor replacement contract requirements.

How will the utility address customer owned portions of service lines that are owned by customers who are unable to pay to replace the portion they own? (40 CFR § 141.84(b)(7)) Air Force or Privatized Housing company will fund.

Is the water system government owned? Yes No

- If yes, will the property owner be responsible for a portion of the replacement cost? Yes No
- If yes, what amount?

Does the water system intend to utilize the resources available through the Drinking Water State Revolving Fund (DWSRF)? Yes No

- If yes, which funding does the system intend to utilize?

6b. Setting Aside Funds for Mailings and Other Future Costs

Our water system will ensure that there are adequate funds to cover the cost of lead service line replacement activities by:

- Securing and setting aside funds on a yearly basis to cover the additional costs of certified mailing associated with each phase of replacement.
- Securing and setting aside funds for any outreach costs associated with replacements.
- Securing and setting aside funds for customer samples following an LSL replacement.
- Securing and setting aside funds for filter pitchers and replacements provided following an LSL replacement.
- Making sure that there is adequate funding set aside if additional staffing is needed.
- Securing and setting aside funds if additional lead service lines and galvanized requiring replacement service lines are identified and must be replaced.

7. LSL Replacement Procedure (40 CFR § 141.84(b)(2))

- We will comply with ANSI/AWWA C810-17 Replacement and Flushing of Lead Service Lines.
- We will use alternative procedures, attached in Appendix C.

8. Notification Requirements

Consumer Notification

- We will notify owners and non-owner customers of plans to conduct a full or partial service line replacement at least 45 days in advance (40 CFR § 141.84(b)(3)):
 - Using Template 5.
 - Using our own template (attached in Appendix D).
- We will use ODW template letters for the following notifications:
- We will use our own template letters for the following notifications (attached in Appendix D):
 - Public Education.
 - Lead Risk Mitigation.
 - Annual notifications of LSLs – each year customers who still have an LSL must receive a notification.
 - Annual notifications of galvanized requiring replacement service lines – required every year.
 - Annual notifications of service lines with unknown materials – required every year.

9. Lead Risk Mitigation Procedures

Event	Pitcher or Filter Program	Sample	Flushing Instructions	Consumer Notification Template	Public Education
Full LSL Replacement	Yes	Yes	Yes	Template 1	Yes
Partial LSL Replacement	Yes	Yes	Yes	Template 1	Yes
Emergency LSL Replacement	Yes	Yes	Yes	Template 1	Yes
Customer notifies utility of intent to replace LSL in advance	Yes	No	Yes	Template 4	Yes
Customer notifies utility of LSL replacement after completion	Yes	No	Yes	Template 4	Yes
Disturbance of a LSL, GSR or Unknown Service Line	No	No	Yes	Template 2	No
Disturbance of a LSL, GSR or Unknown Service Line from replacement of a water meter, meter setter, gooseneck, pigtail or connector	Yes	No	No	Template 3	Yes

Pitcher or Filter Requirements – The waterworks must provide the consumer with a pitcher filter or point-of-use device certified by an American National Standards Institute (ANSI) accredited certifier to reduce lead, six months of replacement cartridges, and instructions for use before the affected service line is returned to service. If the affected service line serves more than one residence or non-residential building (e.g., a multi-unit building), the waterworks must provide a filter, six months of replacement cartridges and use instructions to every residence in the building.

Sample Requirements – The waterworks must offer to collect a follow-up tap sample between three months and six months after completion of a full or partial LSL replacement. The waterworks must provide the results of the sample to the customer as soon as practicable, but no later than 3 calendar days after the waterworks learns of the tap monitoring results.

Flushing Instructions – The waterworks must provide information about service line flushing before the affected service line is returned to service. These instructions are for the customer to flush the service line and premise plumbing of particulate lead.

Consumer Notification Templates -The waterworks must notify customers of the risk of elevated lead levels, provide public education materials, and provide flushing instructions before returning a service line to service following a replacement or disturbance. The templates address the required elements.

10. Lead Service Line Replacement Goal Rate (40 CFR § 141.84(b)(4))

In the event of a lead trigger level exceedance:

- The waterworks serves 10,000 persons or less. A lead service line replacement goal rate is not required.
- The waterworks serves more than 10,000 persons. The waterworks must recommend a lead service line replacement goal rate.

The waterworks proposes a lead service line replacement goal rate of 7 % per year.

To calculate the number of service line replacements applicable to the goal rate, the replacement rate must be applied to the sum of known lead and galvanized requiring replacement service lines when the system first exceeds the trigger level plus the number of lead status unknown service lines in the beginning of each year of a system's annual goal lead service line replacement program.

$$[\text{Required LSL Replacements}] = [\text{Replacement Goal Rate (\%)}] \times [\text{LSL}_{\text{TL}} + \text{GSR}_{\text{TL}} + \text{Unknown}_{\text{Year}}]$$

11. APPENDIX *Check all that apply and are enclosed*

- Appendix A: Flushing by the utility immediately after lead service replacement
- Appendix B: Instructions for customer flushing following a lead service replacement (40 CFR § 141.84(b)(5))
- Appendix C: Prioritized Replacement of lead service lines
- Appendix D: Consumer notification templates
- Appendix E: Notification templates (If developed by water utility)

Appendix A

Flushing by the utility immediately after lead service replacement

After all connections have been completed, the utility will flush the water from an outside connection (such as hose-bib or hose leading from the house side of the meter installation) to remove any particles in the service line and near point-of-entry. The flushing is best done, if possible and practical, before the meter is connected in the service using a "jumper" or straight pipe in place of the meter. The straight pipe will allow for a higher velocity flush and protects the meter from potential damage from lead pipe and other construction-related fragments. Flush at full velocity for at least 10 minutes. If the meter was replaced with a "jumper," it may be reconnected in the service after utility flushing. Following completion of flushing by the utility, the customer shall flush the interior premise plumbing as described in Appendix B.

Before the service line is returned to service, the water utility provides a copy of Appendix B, *Instructions for Customer Flushing*.

Appendix B

Instructions for customer flushing following a lead service replacement

After a service line is replaced, the customer should flush all interior premise plumbing before using the water again. Subsequent flushing by the customer should be done once every two weeks for three months or at other intervals based on monitoring results if available. Utilities may want to encourage best times to flush based on water demand and operations (for example, when neighbors' water usage is low, e.g., midmorning to dinner time or late at night). **Customers shall be advised to not use hot water in the premise plumbing until initial flushing is completed to prevent sedimentation of lead particles in premise hot water tanks.**

Instructions for customers.

1. Find all the faucets that will drain, including the basement and all floors in your house.
2. Remove aerators and screens whenever possible, including the shower heads, from all faucets you plan to flush.
3. Include the laundry tubs, outdoor hose-bibs, bathtubs, and showers as flushing points.
4. After all the aerators are removed, open the faucets in the basement or lowest floor in the house. Leave all faucets running at highest rate possible, using cold water.
5. After the faucets are all open in lowest floor, open the faucets on next highest floor of the house. Continue until faucets are open on all floors.
6. After all faucets are opened, leave the water running for at least 30 minutes.
7. After 30 minutes, turn off the first faucet you opened and continue to turn off other faucets in the same order you turned them on.
8. Clean aerators/screens at each faucet. You may need to replace aerators/screens if too old or worn. To clean aerators, cover the drain in your sink to prevent any aerator parts from falling into the drain, then unscrew the aerator and separate each part. Remove any small particles on the screen, soak the parts in white vinegar for a few minutes, and scrub the parts with a brush. After cleaning, put the aerator parts back together and screw the aerator back onto the faucet.

Consumer Notice Template 1

Full or Partial Lead Service Line Replacement

We completed a replacement, and we are required to provide this information.

[Name of Waterworks]

[Name and phone number for point of contact]

Flush your service line prior to use

After a service line is replaced, the customer should flush all interior premise plumbing before using the water again. Subsequent flushing should be done once every two weeks for three months or at other intervals based on monitoring results if available. **Do not use hot water in the premise plumbing until initial flushing is completed to prevent sedimentation of lead particles in premise hot water tanks.**

Instructions for customer flushing:

1. Find all the faucets that will drain, including in the basement and on all floors in your house.
2. Remove aerators and screens whenever possible, including the shower heads, from all faucets you plan to flush.
3. Include the laundry tubs, hose-bibs, bathtubs, and showers as flushing points.
4. After all the aerators are removed, open the faucets in the basement or lowest floor in the house. Leave all faucets running at highest rate possible, using cold water.
5. After the faucets are all open in lowest floor, open the faucets on next highest floor of the house. Continue until faucets are open on all floors.
6. After all faucets are opened, leave the water running for at least 30 minutes.
7. After 30 minutes, turn off the first faucet you opened and continue to turn off other faucets in the same order you turned them on.
8. Clean aerators/screens at each faucet. You may need to replace aerators/screens if too old or worn. To clean aerators, cover the drain in your sink to prevent any aerator parts from falling into the drain, then unscrew the aerator and separate each part. Remove any small particles on the screen, soak the parts in white vinegar for a few minutes, and scrub the parts with a brush. After cleaning, put the aerator parts back together and screw the aerator back onto the faucet.

Filter

We are required to provide consumers with a pitcher filter or point-of-use device certified by an American National Standards Institute (ANSI) accredited certifier to reduce lead, six months of replacement cartridges and instructions for use.

Health effects of lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

Lead is a common metal that has been in many consumer products but is now known to be harmful to human health if ingested or inhaled. It can be found in lead-based paint, air, soil, household dust, food, some types of pottery, and drinking water. Lead is rarely found in natural sources of water such as rivers, lakes, wells, or springs.

Steps you can take to reduce exposure to lead in drinking water:

- **Run your water before use.** Daily, allow the water to run at the tap for 5 minutes to flush water through the service line and plumbing in the house before using it for drinking or cooking. Taking a shower, running the dishwasher, or flushing the toilet will also flush your lines.
- **Use cold water for drinking, cooking, and preparing baby formula.** Do not cook with or drink water from the hot water tap as lead dissolves more easily into hot water. **Do not use water from the hot water tap to make baby formula.**
- **Clean your aerator.** Regularly clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.
- **Do not boil water to remove lead.** Boiling water does not remove lead.
- **Obtain an NSF (National Sanitation Foundation) Certified home water treatment device** that is certified to remove lead.
- **Identify and replace plumbing fixtures** containing lead and any copper piping with lead solder.

- **Check home wiring.** Water service lines are sometimes used to ground electrical lines. The wiring in your home or building may be attached to your water service line or elsewhere in your plumbing. If you have a lead service line, this can accelerate its corrosion. Have a licensed electrician check your wiring.
- **Get your child tested.** Contact your local health department or healthcare provider to find out how you can get your child's blood tested for lead if you are concerned about exposure.

Consumer Notice 2

Disturbance to a Known or Potential Service Line Containing Lead

There was a disturbance to your service line
[Name of Waterworks]
[Name and phone number for point of contact]

Potential for elevated lead levels in drinking water.

Following a disturbance to your service line, such as operating a valve or changing your water meter, there is potential for elevated lead levels in your drinking water. Please review the following information.

Flush your service line prior to use.

After a service line is replaced, the customer should flush all interior premise plumbing before using the water again. **Do not use hot water in the premise plumbing until initial flushing is completed to prevent sedimentation of lead particles in premise hot water tanks.**

Instructions for customer flushing:

1. Find all the faucets that will drain, including the basement and all floors in your house.
2. Remove aerators and screens whenever possible, including the shower heads, from all faucets you plan to flush.
3. Include the laundry tubs, hose-bibs, bathtubs, and showers as flushing points.
4. After all the aerators are removed, open the faucets in the basement or lowest floor in the house. Leave all faucets running at highest rate possible, using cold water.
5. After the faucets are all open in lowest floor, open the faucets on next highest floor of the house. Continue until faucets are open on all floors.
6. After all faucets are opened, leave the water running for at least 30 minutes.
7. After 30 minutes, turn off the first faucet you opened and continue to turn off other faucets in the same order you turned them on.
8. Clean aerators/screens at each faucet. You may need to replace aerators/screens if too old or worn. To clean aerators, cover the drain in your sink to prevent any aerator parts from falling into the drain, then unscrew the aerator and separate each part. Remove any small particles on the screen, soak the parts in white vinegar for a few minutes, and scrub the parts with a brush. After cleaning, put the aerator parts back together and screw the aerator back onto the faucet.

Steps you can take to reduce exposure to lead in drinking water:

- **Run your water before use.** Daily, allow the water to run at the tap for 5 minutes to flush water through the service line and plumbing in the house before using it for drinking or cooking. Taking a shower, running the dishwasher, or flushing the toilet will also flush your lines.
- **Use cold water for drinking, cooking, and preparing baby formula.** Do not cook with or drink water from the hot water tap as lead dissolves more easily into hot water. **Do not use water from the hot water tap to make baby formula.**
- **Clean your aerator.** Regularly clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.
- **Do not boil water to remove lead.** Boiling water does not remove lead.
- **Obtain an NSF (National Sanitation Foundation) Certified home water treatment device** that is certified to remove lead.
- **Identify and replace plumbing fixtures** containing lead and any copper piping with lead solder.
- **Check home wiring.** Water service lines are sometimes used to ground electrical lines. The wiring in your home or building may be attached to your water service line or elsewhere in your plumbing. If you have a lead service line, this can accelerate its corrosion. Have a licensed electrician check your wiring.
- **Get your child tested.** Contact your local health department or healthcare provider to find out how you can get your child's blood tested for lead if you are concerned about exposure.

Consumer Notice Template 3

Disturbance to a Known or Potential Service Line Containing Lead

There was a disturbance to your service line from replacement of a water meter, water meter setter, gooseneck, pigtail, or connector

[Name of Waterworks]

[Name and phone number for point of contact]

Potential for elevated lead levels in drinking water

Following a disturbance to your service line from replacement of a water meter, water meter setter, gooseneck, pigtail, or connector on the service line, there is potential for elevated lead levels in your drinking water. Please review the following information.

Filters

We are required to provide consumers with a pitcher filter or point-of-use device certified by an American National Standards Institute (ANSI) accredited certifier to reduce lead, six months of replacement cartridges and instructions for use.

Health effects of lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

Lead is a common metal that has been in many consumer products but is now known to be harmful to human health if ingested or inhaled. It can be found in lead-based paint, air, soil, household dust, food, some types of pottery, and drinking water. Lead is rarely found in natural sources of water such as rivers, lakes, wells, or springs.

Steps you can take to reduce exposure to lead in drinking water

Consumer Notice Template 4

Customer Lead Service Line Replacement

Utility notified of intent to replace customer's portion of an LSL.
Utility notified of completed replacement of customer's portion of an LSL.
We are required to provide this information.
[Name of Waterworks]
[Name and phone number for point of contact]

Flush your service line prior to use

After a service line is replaced, the customer should flush all interior premise plumbing before using the water again. Subsequent flushing should be done once every two weeks for three months or at other intervals based on monitoring results if available. **Do not use hot water in the premise plumbing until initial flushing is completed to prevent sedimentation of lead particles in premise hot water tanks.**

Instructions for customer flushing:

1. Find all the faucets that will drain, including the basement and all floors in your house.
2. Remove aerators and screens whenever possible, including the shower heads, from all faucets you plan to flush.
3. Include the laundry tubs, hose-bibs, bathtubs, and showers as flushing points.
4. After all the aerators are removed, open the faucets in the basement or lowest floor in the house. Leave all faucets running at highest rate possible, using cold water.
5. After the faucets are all open in lowest floor, open the faucets on next highest floor of the house. Continue until faucets are open on all floors.
6. After all faucets are opened, leave the water running for at least 30 minutes.
7. After 30 minutes, turn off the first faucet you opened and continue to turn off other faucets in the same order you turned them on.
8. Clean aerators/screens at each faucet. You may need to replace aerators/screens if too old or worn.

Filter

We are required to provide consumers with a pitcher filter or point-of-use device certified by an American National Standards Institute (ANSI) accredited certifier to reduce lead, six months of replacement cartridges and instructions for use.

Health effects of lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

Lead is a common metal that has been in many consumer products but is now known to be harmful to human health if ingested or inhaled. It can be found in lead-based paint, air, soil, household dust, food, some types of pottery, and drinking water. Lead is rarely found in natural sources of water such as rivers, lakes, wells, or springs.

Steps you can take to reduce exposure to lead in drinking water

- **Run your water before use.** Daily, allow the water to run at the tap for 5 minutes to flush water through the service line and plumbing in the house before using it for drinking or cooking. Taking a shower, running the dishwasher, or flushing the toilet will also flush your lines.
- **Use cold water for drinking, cooking, and preparing baby formula.** Do not cook with or drink water from the hot water tap as lead dissolves more easily into hot water. **Do not use water from the hot water tap to make baby formula.**
- **Clean your aerator.** Regularly clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.
- **Do not boil water to remove lead.** Boiling water does not remove lead.
- **Obtain an NSF (National Sanitation Foundation) Certified home water treatment device** that is certified to remove lead.
- **Identify and replace plumbing fixtures** containing lead and any copper piping with lead solder.
- **Check home wiring.** Water service lines are sometimes used to ground electrical lines. The wiring in your home or building may be attached to your water service line or elsewhere in your plumbing. If you have a lead service line, this can accelerate its corrosion. Have a licensed electrician check your wiring.

- **Get your child tested.** Contact your local health department or healthcare provider to find out how you can get your child's blood tested for lead if you are concerned about exposure.

Consumer Notice Template 5

Planned Lead Service Line Replacement

We plan to complete your lead service line, and we are required to provide this information.

[Name of Waterworks]

[Name and phone number for point of contact]

Planned replacement date: [date]

[Use for partial service line replacement:]

Planned Partial Lead Service Line Replacement

We plan to partially replace a lead service line (e.g., replace only the portion of a lead service line owned by the water utility) in coordination with planned infrastructure work. We will replace the lead service line from the water main to the water meter.

Notice Required

We must provide this notice to the owner of the affected service line, or the owner's authorized agent, as well as non-owner resident(s) served by the affected service line at least 45 days prior to the replacement.

Health effects of lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

Lead is a common metal that has been in many consumer products but is now known to be harmful to human health if ingested or inhaled. It can be found in lead-based paint, air, soil, household dust, food, some types of pottery, and drinking water. Lead is rarely found in natural sources of water such as rivers, lakes, wells, or springs.

Customer Portion of the Service Line

The customer or property owner is responsible for maintaining the portion of the service line from the water meter to the home or building (customer service line). As part of the planned infrastructure work, you may work with us to replace the customer service line at the same time as utility service line. The water utility is not required to bear the cost of replacement of the customer service line. Please contact us at the phone number above to learn more about replacement of the customer service line.

[Use for Full Service Line Replacements:]

Planned Full Lead Service Line Replacement

We plan to complete a full replacement of a lead service line (i.e., replace entire lead service). We will replace the lead service line from the water main to the home or building.

Notice Required

We must provide this notice to the owner of the affected service line, or the owner's authorized agent, as well as non-owner resident(s) served by the affected service line at least 45 days prior to the replacement.

Health effects of lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

Lead is a common metal that has been in many consumer products but is now known to be harmful to human health if ingested or inhaled. It can be found in lead-based paint, air, soil, household dust, food, some types of pottery, and drinking water. Lead is rarely found in natural sources of water such as rivers, lakes, wells, or springs.

Customer Portion of the Service Line

The customer or property owner is responsible for maintaining the portion of the service line from the water meter to the home or building (customer service line). Before proceeding with the work, we must establish an agreement. Please contact us at the phone number above to learn more about replacement of the customer service line.

Langely AFB - LSLR Prioritization

Location Information				Entire Service Line Material Classification	Lead Service Line Replacement (LSLR)
Unique Service Line ID	Location Identifier Street Address	Sensitive Population? (Yes/No)	Disadvantaged Neighborhood? (Yes/No)		
<i>A Unique ID is recommended for each service line.</i>	<i>Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.</i>	<i>Select Yes if sensitive subpopulation, e.g., day care, school, multifamily home. If Yes-Other, describe in the Notes field.</i>	<i>Does location meet state affordability guidelines or other measures?</i>	<i>Dropdown list includes four required service line classifications of Lead, Non-lead, Galvanized Requiring Replacement, or Unknown</i>	<i>Priority Based Upon 6 Tier Air Force Playbook Criteria</i>
