FINDING OF NO SIGNIFICANT IMPACT (FONSI) AND FINDING OF NO PRACTICABLE ALTERNATIVE (FONPA) For the

Live Mission Operations Capability (LMOC)

Master Node Facility Construction Environmental Assessment (EA)

at

Joint Base Langley-Eustis, Langley AFB, Virginia

Pursuant to provisions of the National Environmental Policy Act (NEPA), Title 42 United States Code (USC) Sections 4321 to 4347, implemented by Council on Environmental Quality (CEQ) Regulations, Title 40, Code of Federal Regulations (CFR) § 1500-1508, and 32 CFR § 989, Environmental Impact Analysis Process, the U.S. Air Force (Air Force) assessed the potential environmental consequences associated with construction of a new LMOC facility. The LMOC facility is necessary to provide adequate, secure, and adaptable space to support the mission of the 633d Air Base Wing (ABW) at Joint Base Langley-Eustis AFB (JBLE-Langley), Hampton County, Virginia, and the Air Force throughout the United States.

PURPOSE AND NEED

The purpose of the proposed action is to create an LMOC Master Node Facility at JBLE-Langley. This facility will in turn be used as a prototype for other LMOC Master Node Facilities to support the Air Force throughout the United States (Urban Collaborative, 2020). A facility to support LMOC does not exist within the Air Force. The proposed action is needed to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions. It requires Sensitive Compartmentalized Information Facility (SCIF) areas, with both Special Access Program (SAP) and Top Secret/Sensitive Compartmentalized Information (TS/SCI) capabilities (Urban Collaborative, 2020).

The Environmental Assessment (EA), incorporated by reference into this finding, analyzes the potential environmental consequences of activities associated with the construction of the LMOC Master Node Facility at JBLE-Langley, and provides environmental protection measures to avoid or reduce adverse environmental impacts.

PROPOSED ACTION

The EA considers all potential impacts of the proposed action, which includes initiatives for facility construction, infrastructure demolition and construction, building demolition, and the No-Action Alternative. The EA also considers proposed actions that are reasonably foreseeable in addition to cumulative effects which may have environmental impacts when combined with other projects in the Region of Influence (ROI).

Under the Proposed Action, a new LMOC Master Node Facility would be built. The proposed LMOC facility is planned to be situated at the SW intersection of Sweeney Boulevard and Bryant Avenue just south of the South Flightline District. The driving factor leading to the selection of this location relates to its adjacency to the flightline and ease of short-term construction (Urban Collaborative, 2020).

The LMOC facility would be constructed to be above the known 100-year floodplain in an already developed area. Destruction or modification of existing wetlands will be avoided. There are no wetlands in the proposed action area.

ALTERNATIVE EVALUATION PROCESS

Planning initiatives and site analysis detailed in the JBLE LMOC Customer Concept Document (CCD) (Urban Collaborative, 2020), evaluated 13 separate locations for siting the LMOC. Ten of the sites are located on the flightline side of the installation, and three sites are in the Intelligence, Surveillance and Reconnaissance (ISR) Campus Area. Each potential building site was fully evaluated to consider: operational, natural, environmental, built/historic buildings, location of archaeological sites, capacity opportunities, sustainability development indicators, energy use, asset optimization and space use, Major Command (MAJCOM) and tenant initiatives, and mission requirements. As part of the JLBE-Langley LMOC site analysis, stakeholders assigned each potential site a weighted course of action (COA) score. A brief description of alternate building sites evaluated, their COA score, and development constraints are summarized here:

Alternative Site Analysis: Flightline Area Development Plan (ADP) COAs:

- 1. **1 MXG, 1 MXS Replacement (Bldg 751)** (72%). This site has been occupied for 10 years, is a little remote, and would be difficult to raise to the required elevation.
- 2. **733 LRS Site (Bldg 777)** (75%). The timing/phasing of this project effects other existing buildings and includes a loss of parking for future development. There are also airfield constraints related to noise (greater than 85 dBA) and it is adjacent to an environmental restoration site. This building is also a historical structure and is located within the explosive safety quantity distance (ESQD) arc. Meeting anti-terrorism (AT) standoff distances is also a constraint.
- 3. **SFS Site (Bldg 775)** (76%) The timing/phasing of this project effects other existing buildings and includes a loss of parking for future development. There are also airfield constraints related to noise (greater than 85 dBA) and it is within the runway transitional surface. The site is adjacent to an environmental restoration site, is identified as a historical structure, and is located within the ESQD arc. Meeting AT standoff distances would also be a challenge given the limited, developable area.
- 4. **192 Wing HQ (Temp)** (78%) (preferred alternative for Flightline ADP COAs). This site is not technically within the South Flightline District. It is located at the site of the current Credit Union, building 467, which is scheduled for demolition.
- 5. **Hammond Ave & Sweeney Blvd** (76%). This site does not support the IDP, is not technically within the South Flightline District, and would be a longer walk so some people will drive. This site also includes known archeological sites and has development constraints related to AT standoff distances.
- 6. **1 MXG Site (Bldg 763)** (76%). This site does not support Flightline South ADP and would be a longer walk, so some people will drive. This site has constraints related to AT standoff distances which would be difficult to meet due to limited space for future development and is also located within an existing environmental restoration site.
- 7. **633 CES Site (Bldg 367)** (70%). This site does not support Flightline South ADP, is not easily walkable, and requires demolition of fuel tanks.

- 8. **ACC Site (Bldg 368)** (63%). This site does not support Flightline South ADP, is not easily walkable, and requires demolition of fuel tanks.
- 9. **Outdoor Recreation Relocation** (53%). This is a small site, not walkable, and technically not within the Flightline South District.
- 10. **633 CES Site (Bldg 328)** (60%). This site has height restrictions, is not walkable, and does not support Flightline South ADP.

The final determining factor for the flightline ADP COAs was the proximity to the flightline. Site 4, the 192 Wing HQ was selected for further detailed site analysis.

Alternative Site Analysis: ISR Site COAs:

- 1. **South Quad East** (69%). This site is far from the gate, requires slow vehicle speeds (15 mph), is subject to aircraft noise, and is far from food options.
- 2. **South Quad West** (69%). This site is far from the gate, requires slow vehicle speeds (15 mph), is subject to aircraft noise, and is far from food options.
- 3. **North Quad, next to DGSX** (75%) (preferred alternative for ISR Site COAs). This site is farther from the flightline than the East and West Quads, is far from food options, and is far from a gate.

Site 3, the North Quad, was selected for further detailed site analysis from the ISR Site COAs.

Ultimately, the planning team developed two detailed site plans for both preferred locations. It was decided that the most important criteria for the LMOC facility is **Proximity to Fighter Town**; this ensures the facility will benefit from local operators. The flightline-side COA, Site 4 was selected as the preferred alternative (Urban Collaborative, 2020).

NO-ACTION ALTERNATIVE

Under the No-Action Alternative, this project would not be implemented resulting in no change in the status quo. The LMOC Master Node Facility would not be built. The existing facility used to support exercise mission planning, execution, monitoring, debriefing, and administrative functions, 192 Headquarters (HQ) (temporary location), will continue to be maintained. However, the surrounding infrastructure and current building would continue to be inadequate to support rapidly changing and increasing mission requirements. The LMOC workshop vision of creating an adaptable, multi-story LMOC that is secure and inter-operable with user-friendly and light-filled spaces, would not be met. No significant impacts would be experienced with the No-Action alternative.

3

ENVIRONMENTAL CONSEQUENCES

The analyses of the affected environment and environmental consequences of implementing the Preferred Alternative presented in the EA concluded that by implementing standing environmental protection measures and operational planning, the Air Force would be in compliance with all terms and conditions and reporting requirements.

The Air Force has concluded that the Preferred Alternative has no significant impact on the following resources which were carried through for full analysis in this EA:

- Air Installation Compatibility Use Zone (AICUZ),
- Air Quality,
- Cultural Resources,
- Hazardous Materials and Waste,
- Safety and Occupational Health,
- Transportation,
- Infrastructure and Utilities, and
- Wetlands and Chesapeake Bay Preservation Areas.

In accordance with 32 CFR § 989.10, Tiering, the Air Force is encouraged to make reference to other environmental documents, and environmental documents prepared by other agencies to eliminate repetitive discussions of the same issue and to focus on the issues relating to specific actions. If the Air Force adopts another Federal agency's environmental document, subsequent Air Force environmental documents may also be tiered. This logic is carried forward in 32 CFR § 989.14(d), Environmental Assessment where long descriptions and lengthy, detailed data should be avoided and rather incorporated by reference to the background data which supports the concise discussion of the proposal and relevant issues. The primary NEPA documents reviewed as part of the preliminary Environmental Impact Analysis Process (EIAP) to determine which resource areas should be carried forward for full analysis include:

Joint Base Langley Eustis – Langley (JBLE-Langley). 2016. Final Environmental Assessment for Installation Development at JBLE-Langley, Virginia. September 2016.

United States (US) Army Corps of Engineers et al., 2021. Environmental Impact Statement (EIS) Fifth Generation Formal Training Unit Optimization, JBLE-Langley-Eustis, VA, Eglin Air Force Base, Florida. Feb. 2021.

Joint Base Langley Eustis – Langley (JBLE-Langley). 2022. Final Environmental Assessment for Intelligence, Surveillance, and Reconnaissance (ISR) Campus Area Development at Joint Base Langley-Eustis. JBLE-Langley-Eustis, Virginia. June 2022.

Joint Base Langley Eustis – Langley (JBLE-Langley). 2022. Capacity Analysis Report: Joint Base Langley-Eustis, Virginia. JBLE-Langley-Eustis, Virginia. November 2022.

As a result of the preliminary EIAP, the Proposed Action was determined to have no effect on several resources; therefore, these resources were eliminated from detailed analysis in this EA. The resources

that were eliminated from detailed analysis and the rationale for their elimination are presented in the subsections below:

Aesthetics and Visual Resources

Aesthetics and Visual Resources are fully analyzed within the referenced 2016 EA. Criteria used to determine if a significant impact to this resource area exists include having a substantial adverse impact on a scenic vista or viewshed; substantially damaging scenic resources, including, but not limited to, primary/secondary ridgelines, trees, rock outcroppings, and historic buildings; substantially degrading the existing visual character or quality of the site and its surroundings; or, create a new source of substantial light or glare that would adversely impact day or nighttime views in the area. The proposed LMOC facility is planned to be located in an area with existing buildings and car parks but is located in the JBLE-Langley Historic District. Smaller parking lots enhance the visual environment by increasing the ratio of landscaped area to paved area and allowing more conformance to natural topography. Parking lots between and behind buildings can reduce the visual impact from the circulation system and increase pedestrian access from walkway systems. The new LMOC Facility will be an improvement over current conditions since large, existing parking lots (one, 193-car park and one 168-car park), will be demolished and replaced with a smaller, 181-car park and the building façade will be placed along the primary vehicle routes. The Proposed Action will be subject to satisfying all Section 106 requirements, which consider building activities within a historic district.

Biological/Natural Resources

Special species status was verified using US Fish and Wildlife Information for Planning and Consultation (IPaC) report generated on May 10, 2023. The three species on this list and their status include the endangered northern long-eared bat (*Myotis septentrionalis*); the proposed endangered tricolored bat (*Perimyotis subflavus*); and one candidate species, the monarch butterfly (*Danaus plexippus*). No critical habitat, refuge lands, or fish hatcheries exist in the Proposed Project Area. The May 10, 2023 verification ensured consistency between the ISR EA and the referenced 2016 EA, which also indicates no critical habitat, refuge lands or fish hatcheries in existence in the City of Hampton. There are no known nests within the project area.

Full analysis of the northern long-eared bat and the tricolored bat are included in the referenced 2021 JBLE-Langley EIS. The JBLE-Langley EIS concludes that the northern long-eared bat would not be affected by land disturbance or new construction activities and the tricolored bats are likely transitory individuals (at the Installation) and not likely to be affected by the proposed construction activities. Though the northern long-eared bat may occur in cavities and crevices of large live and dead trees during the summer and in winter hibernating in caves and mines, no evidence of winter hibernation or summer roosts have been observed on JBLE-Langley Main Base (USACE et al., 2021). However, the 2021 JBLE-Langley INRMP indicates the presence of lactating tricolored bats present and breeding at the Big Bethel Reservoir (which is approximately 5 miles from the Proposed Action Area). A more comprehensive land use study and management plan for bats at Big Bethel Reservoir is programmed for 2023. There are no known tricolored bats roosts or maternity colonies at JBLE-Langley Main Base. Therefore, it is unlikely that the tricolored bats would be adversely impacted as a result of the Proposed Action.

The candidate species monarch butterfly is also unlikely to be impacted since the proposed action occurs within an already built-up area.

Bird species protected by the Migratory Bird Treaty Act (hereafter referred to as migratory birds) may be present within the Proposed Action Area. The IPaC report identifies 20 birds of conservation concern.

JBLE-Langley maintains a Bird/wildlife-Aircraft Strike Hazard (BASH) prevention program to manage risks for military aircraft, pilots, and injury or death to birds and other wildlife. As part of the BASH program, the time during the year when peak bird migration activity occurs is identified and mitigating measures are outlined. Implementation of the Proposed Action would adhere to the BASH prevention program and would implement mitigating techniques to help reduce threats to any migratory birds. If any active nests (eggs, fledglings, etc.) were discovered in the Proposed Action Area, work would stop and the JBLE-Langley Natural Resources Manager would be contacted. Accordingly, significant adverse impacts on migratory birds is unlikely.

The 2021 JBLE-Langley INRMP indicates that while monitoring for both currently listed and newly listed species is ongoing, no new rare, threatened, or endangered species have been observed or documented. Consultations with JBLE-Langley's Natural Resource Program Manager also indicates that with respect to migratory birds, the habitat in the Proposed Action Area is not suitable for nesting for most species listed in the IPaC report; there is a potential for the wood thrush to nest in nearby trees, but all potential nesting areas are not specifically tracked. For these reasons, it is anticipated that the Proposed Action would have no appreciable effect on Natural Resources.

Earth Resources

Geology. The Proposed Action would not involve any activity that would adversely affect subsurface geological formations. The development of the LMOC Facility including construction and demolition activities, would be conducted using standard methods that would have no appreciable impact on geology. Excavation is expected to be conducted only to depths necessary for the facility foundations and utility connections. For these reasons, the Proposed Action would have no appreciable effect on geology.

Soils. Because the Proposed Action will be conducted in an already built up area, adverse effects on soils will not occur. Construction activities would not be conducted during periods of wet weather and would be staged to allow for stabilization of disturbed soils. Fugitive dust control techniques, such as watering and stockpiling, would be implemented to minimize adverse impacts and would comply with applicable regulations.

Topography. The topography where the Proposed Action will occur is relatively flat, since there are substantial parking lots present. There is greater slope outside of the existing parking lots, but current plans avoid substantial activity in those areas due to increased expenses constructing in greater slope areas. Buildings will therefore not be built on a highly sloped site so the finished floor elevation will not impact the surrounding topography.

Land Use

The Proposed Action is planned in an area that is already built up and disturbed by past development. The Regulating Plan provides flex-use functions on this site (prohibiting industrial or housing). The general construction and demolition activities would occur only within areas that correlate with compatible land use types or may be permitted with specific restrictions to ensure that development within those areas is not disruptive to the installation's missions. For these reasons, the Proposed Action would have no appreciable effect on Land Use.

Noise

Noise generated from construction and demolition activities under the Proposed Action would temporarily increase ambient noise levels in and around the sites. However, the increased noise levels

would be intermittent and limited to daytime working hours during the overall construction/demolition period. The Proposed Action would have no appreciable effect on noise.

Socioeconomics/Environmental Justice

The Proposed Action would not impact the number of persons currently working at JBLE-Langley or living in the local area. During the construction and demolition work, there would be negligible impacts on the local economy in the form of temporary construction employment opportunities. For these reasons, the Proposed Action would have no appreciable effect on the local demographics, local economy, number of persons living in on-base or off-base housing, number of children attending schools in the area, or demand for emergency services (medical, police, and firefighting).

Water Resources

Surface water. JBLE-Langley is located between the Northwest and Southwest Branches of the Back River, a tributary of Chesapeake Bay. In general, drainage for the area ultimately flows into Chesapeake Bay via the Back River, Newmarket Creek, Brick Kiln Creek, and Tabbs Creek. Other than drainage ditches associated with the existing car park(s), there are no surface water or wetlands present in the Proposed Action area. The installation's stormwater system consists primarily of drainage ditches in more undeveloped areas, and underground piping in developed areas. Compliance with applicable federal and state law will be followed to protect the nation's waters and discharge of any pollutant into any jurisdictional waters of the U.S. as defined in 40 CFR § 120.2 will be prohibited unless appropriate permitting requirements have been met. For these reasons, the Proposed Action will have no appreciable effect on surface water.

Groundwater. The three water bearing units beneath JBLE-Langley are the Water Table Aquifer, the Yorktown-Eastover Aquifer, and the Chickahominy-Piney Point Aquifer. The groundwater beneath JBLE-Langley is not a practical source of irrigation or potable water. The potable water is supplied by the City of Newport News Water Works and is ultimately sourced from the Chickahominy River. For these reasons, the Proposed Action will not impact groundwater resources.

Floodplains. The discussion of floodplains is tiered from the 2016 EA, which describes that JBLE-Langley is almost entirely within the 100-year floodplain. Given this fact, there is no other practicable alternative within the footprint of JBLE that would actually avoid construction in the 100-year floodplain. However, impacts to the floodplains will be greatly reduced since new buildings will be constructed to be above the known 100-year floodplain in an area that is already developed. Although the Proposed Action may have an irreversible and irretrievable impact on floodplains, the Proposed Action would only impact a small portion of the 100-year floodplain area. Additionally, the potential demolition of building 467 within the 100-year floodplain would represent a long-term, minor, beneficial effect. The Proposed Action would not have significant impacts associated with floodplains.

Coastal zone management areas (CZMA). The Virginia Department of Environmental Quality (VDEQ) is responsible for oversight and implementation of Virginia's Coastal Zone Management Program established in 1986 which is comprised of state agencies and local governments that administer enforceable laws, regulations, and policies to protect the Commonwealth's coastal resources. Federal lands, including JBLE-Langley, are statutorily excluded from the coastal zone pursuant to Section 304 of the CZMA. CZMA requires that federal agencies be consistent with enforceable policies of state coastal zone management programs when conducting or supporting activities within or outside the coastal zone that affect land use, water use, or natural resources of the coastal zone. The Proposed Action would not have a significant impact to land use, water use, or natural resources of the coastal zone. For these

reasons, the Proposed Action will not impact the CZMA but would still be subject, to the maximum extent practicable, enforceable policies of the states coastal zone management program to ensure federal consistency. All relative agencies will be contacted during the early planning stages of the Proposed Action and is currently on-going.

Wetlands. Wetland resources are protected under Section 404 of the Clean Water Act (CWA) (33 U.S.C. § 1344). Wetlands on federal lands are further protected under EO 11990, Protection of Wetlands, which directs agencies to "minimize the destruction, loss, or degradation of wetlands, and to preserve and enhance the natural and beneficial values of wetlands" when carrying out agency actions. The Proposed Action is planned in an area that does not contain a wetland. The general construction activities associated with the Proposed Action will occur in an area that is already built up and is currently paved. For these reasons, the Proposed Action would have no appreciable effect on wetlands. Wetland verification ensured consistency with the referenced 2022 CAR (JBLE-Langley, 2022a), the 2019 wetland delineation performed by U.S. Army Corps of Engineers (USACE) (USACE, 2019) and the National Wetlands Inventory (USFWS, 2022).

STAKEHOLDERS, ELECTED OFFICIALS, AND PUBLIC INVOLVEMENT

An Early Public Notice was published in The Daily Press, Newport News, Virginia (VA), on May 23-24, 2021, announcing commencement of the EA detailing that the action would take place in a floodplain and seeking advanced public comment. No public comments were received. A public notice was placed in The Daily Press on January 22-23, 2023, announcing the availability of the Draft EA and Draft FONSI/FONPA for public review and comment. The documents were made available for review on the internet at: https://www.jble.af.mil/About-Us/Units/Langley-AFB/Langley-Environmental/ from January 22, 2023, to March 23, 2023. The Air Force received comments from one public agency during the review period. The Virginia Department of Historic Resources (DHR) indicated no historic properties will be affected by the project and that if unidentified historic properties are discovered during implementation of the project DHR should be notified.

Tribal consultation letters were sent via email and mailed to federally recognized tribes on November 15-16, 2022. No Tribal comments were received. Additional attempts to contact tribal representatives were made throughout the duration of EA development by announcing the availability of the Draft EA and making hard copies of them available for review in the Bateman Library, the Hampton Library, and the Poquoson Library. Appendix A includes records of all correspondence with the tribes.

FINDING OF NO PRACTICABLE ALTERNATIVE (FONPA)

Per 32 CFR § 989.14(g), there are no practicable alternatives to construction within the 100-year floodplain. To support LMOC activities throughout the installation and AF wide, construction within the 100-year floodplain will be necessary and is unavoidable. Other alternatives considered were reviewed as part of the LMOC CCD (Urban Collaborative, 2020) and were eliminated from further detailed analysis because they did not meet the stated purpose and need for the action, were not practicable, or would have led to greater overall environmental impact. For the reasons stated in the EA, the eliminated alternatives are not practicable alternatives and do not avoid construction within a 100-year floodplain. The only practicable alternative is described in the "Description of the Proposed Action" section above.

Based on my review of the facts and analyses contained in the attached EA, I find that there is no practicable alternative to action in a 100-year floodplain.

FINDING OF NO SIGNIFICANT IMPACT (FONSI)

Based on my review of the facts and analyses contained in the attached EA, conducted under the provisions of CEQ NEPA Regulations, (Title 40 Code of Federal Regulations [CFR] §§ 1500–1508) [(The May 20, 2022 version of CEQ NEPA rules is being used, 85 FR 43304-43376], and 32 CFR § 989, Department of the Air Force EIAP, I conclude that the Preferred Alternative, build a new LMOC Master Node Facility, would not have a significant environmental impact, either by itself or cumulatively to other known projects at JBLE-Langley. Accordingly, an Environmental Impact Statement is not required. Section 106 requirements have been satisfied. The signing of this Finding of No Significant Impact and Finding of No Practicable Alternative completes the environmental impact analysis process.

1.0 PURPOSE OF AND NEED FOR THE PROPOSED ACTION

1.1 INTRODUCTION

This Environmental Assessment (EA) addresses the potential impacts associated with establishing an LMOC Master Node Facility at Joint Base Langley-Eustis, Langley Air Force Base (JBLE-Langley), Virginia. It will also support the Air Force throughout the United States (Urban Collaborative, 2020), since a facility to support LMOC does not exist within the Air Force. General construction and demolition activities are planned for the Proposed Action as identified in the LMOC CCD (Urban Collaborative, 2020). The LMOC CCD is the primary driver referenced for the types of activities expected with this project; however, the Regulating Plan is the driver for Land Use activities at the installation. This EA was prepared to evaluate the potential environmental impacts of the Proposed Action in compliance with the National Environmental Policy Act of 1969 (NEPA) (42 United States Code [USC] 4331 et seq.), the regulations of the President's Council on Environmental Quality (CEQ) that implement NEPA procedures (Title 40 Code of Federal Regulations [CFR] §§ 1500-1508) [(The Sep. 14, 2020 version of CEQ NEPA rules is being used, 85 FR 43304-43376, as modified by the CEQ NEPA Implementing Regulations Revisions Final Rule that became effective May 20, 2022, 87 FR 23453], the Air Force Environmental Impact Assessment Process Regulations at 32 CFR Part 989, and Air Force Instruction 32-1015 (U.S. Air Force, 2019).

The Proposed Action is needed to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions. It requires Sensitive Compartmentalized Information Facility (SCIF) areas, with both Special Access Program (SAP) and Top Secret/Sensitive Compartmentalized Information (TS/SCI) capabilities (Urban Collaborative, 2020). The LMOC CCD identifies requirements for building construction and demolition and considers current and future mission and facility requirements, development constraints and opportunities, and land use relationships.

JBLE-Langley is located in the Coastal Plain/Tidewater region of Virginia, in an area known as the Virginia Peninsula. It is situated just north of Hampton, Virginia and is on the western edge of the Chesapeake Bay. It is approximately 80 miles southeast of Richmond, Virginia and occupies 2,883 acres of land. It was established in 1916 and has hosted a variety of missions and aircraft types throughout its history. JBLE-Langley is home to the 633d ABW. The primary tenant mission at JBLE Langley is that of the 1st Fighter Wing (FW), which has three squadrons. The 27th Fighter Squadron (FS) and the 94 FS both fly the F-22 Raptor airframe, and the 71st Fighter Training Squadron (FTS) flies the T-38A. The 192 Wing (WG), an Air National Guard unit, augments the 1 FW by integrating its flight crews with the 27 FS and 94 FS. The 633d ABW and 1 FW accomplish their base support and air operation missions through several subordinate groups. JBLE-Langley is also home to HQ ACC. Permanent beddown of the F-22 Formal Training Unit (FTU) mission at JBLE-Langley is currently underway. With this, the following units will be relocated to JBLE-Langley: 43 FS, 43 Aircraft Maintenance Squadron (AMU), the 2nd FTS, and the 325th Training Support Squadron. Figure 1.1 illustrates the regional location of JBLE-Langley.

In recent years, JBLE-Langley has also been home to emerging ISR operations and is currently home to the 480 and 363 ISR Wings, which oversee the Global Cyberspace Integration Center (GCIC) and the Distributed Common Ground System (DCGS). JBLE-Langley is also an aerial port of embarkation (APOE)

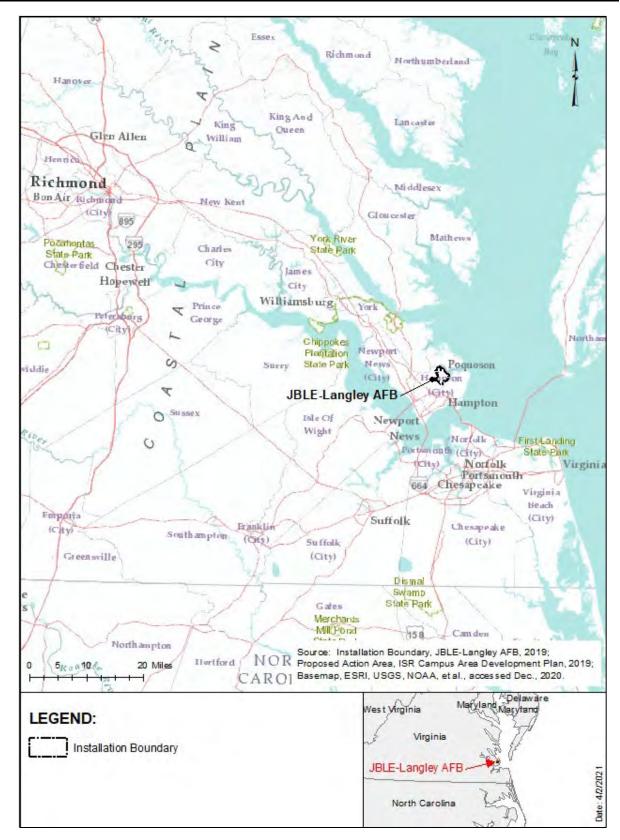

Figure 1.1: Location of JBLE-Langley AFB

Environmental Assessment
Purpose of and Need for the Proposed Action_

LMOC Master Facility Node JBLE-Langley AFB, VA

for the rapid deployment of fighter aircraft, supporting forces and units from neighboring military installations to meet worldwide mission requirements (Mason & Hanger, 2017).

The intent of the 633d ABW and HQ ACC is to streamline NEPA compliance and facilitate the installation development process by evaluating in one integrated document the potential impacts on the environment of the project proposed for execution at JBLE-Langley.

The information presented in this document will serve as the basis for deciding whether the Proposed Action would result in a significant impact to the environment, requiring the preparation of an Environmental Impact Statement (EIS), or whether no significant impacts would occur, in which case a Finding of No Significant Impact (FONSI) would be appropriate. If the execution of any of the proposed action would involve "construction" in a wetland as defined in Executive Order (EO) 11990, Protection of Wetlands, or "action" in a floodplain under EO 11988, Floodplain Management as amended by EO 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input, a Finding of No Practicable Alternative (FONPA) would be prepared in conjunction with the FONSI.

1.2 PURPOSE OF PROPOSED ACTION

The purpose of the proposed action is to create an LMOC Master Node Facility at JBLE-Langley. This facility will in turn be used as a prototype for other LMOC Master Node Facilities to support the Air Force throughout the United States (Urban Collaborative, 2020). A facility to support LMOC does not currently exist within the Air Force. The proposed action is needed to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions. It requires SCIF areas, with both SAP and TS/SCI capabilities (Urban Collaborative, 2020). The proposed action has a specific purpose and need, which is presented in Table 1.1 and further described in section 1.3.

Table 1.1: Purpose and Need for Proposed Action

Project Name	Purpose of the Action	Need for the Action
LMOC Master Facility Node Construction	The purpose of the LMOC Facility is to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions.	The need for an LMOC Master Node Facility is because a facility is needed to support JBLE- Langley's Live Mission Operation Capabilities and it can further be used as a prototype for other LMOC Master Node Facilities to
		support the Air Force throughout the US, since no LMOC facilities currently exist in the US.

1.3 NEED FOR PROPOSED ACTION

The need for the proposed action at JBLE-Langley is to construct a new LMOC Master Node Facility, provide and maintain infrastructure that is adequate to the needs of 633d ABW and its tenant units, and to do so in a manner that:

- Meets applicable DoD installation master planning criteria, consistent with Unified Facilities Criteria (UFC) 2-100-01, Installation Master Planning.
- Aligns with the 2011 Air Force Civil Engineering Strategic Plan (U.S. Air Force, 2011a).
- Meets current Air Force requirements for functional space, consistent with Air Force Manual 32-1084, Facility Requirements (U.S. Air Force, 2016).
- Meets applicable DoD antiterrorism/force protection criteria, consistent with UFC 4-010-01, DoD Minimum Antiterrorism Standards for Buildings, and the Air Force Installation Force Protection Guide.
- Reduces the consumption of fuel, energy, water, and other resources; maximizes the use of
 existing facilities; and reduces the footprint of unnecessary or redundant facilities and
 infrastructure in accordance with EO 13990, Protecting Public Health and the Environment and
 Restoring Science to Tackle the Climate Crisis dated January 25, 2021.
- Efficient Federal Operations (the Energy Policy Act of 2005, and the Air Force's 20/20 by 2020 initiative).
- Provides reliable utilities and an efficient transportation system to support JBLE-Langley, consistent with Air Force Manual 32-1084.
- Supports and enhances the morale and welfare of personnel assigned to the installation, their families, and civilian staff, consistent with Department of Defense Instruction 1015.10, Military Morale, Welfare, and Recreation (MWR) Programs (6 July 2009).
- Conforms to the Joint Base Langley-Eustis Installation Facilities Standards (IFS) Vol. 1 (JBLE, 2018a),
 which helps to ensure a consistent and coherent architectural character throughout JBLE-Langley.

1.4 INTERAGENCY/INTERGOVERNMENTAL COORDINATION AND CONSULTATIONS

1.4.1 Interagency Coordination and Consultations

Scoping is an early and open process for developing the breadth of issues to be addressed in the EA and for identifying significant concerns related to a proposed action. Per the requirements of Intergovernmental Cooperation Act of 1968 (42 U.S.C. 4231(a)) and EO 12372, Federal, state, and local agencies with jurisdiction that could be affected by the proposed actions were notified during the development of this EA.

1-4

Appendix A contains the list of agencies consulted and all Agency correspondence.

LMOC Master Facility Node JBLE-Langley AFB, VA

1.4.2 Government to Government Consultations

Consistent with National Historic Preservation Act (NHPA) of 1966, as amended (54 U.S.C. 306108), and its implementing regulations (36 CFR Part 800); DoD Instruction 4710.02, Interactions with Federally-Recognized Tribes; Department of the Air Force Instruction (AFI) 90-2002, Interactions with Federally-Recognized Tribes; and Air Force Manual (AFMAN) 32-7003, Environmental Conservation; the DAF is also consulting with federally recognized tribes that are historically affiliated with the geographic region of each Alternative site being considered for the Proposed Action regarding the potential to affect properties of cultural, historical, or religious significance to the tribes. The tribal consultation process and timeline is distinct from NEPA consultation and the interagency coordination process and requires separate notification of all relevant tribes. The JBLE-Langley point-of-contact for Native American tribes is the Installation Commander. Tribal consultation letters were sent via email and mailed to federally recognized tribes on November 15-16, 2022. No Tribal comments were received.

The Native American tribal governments that were consulted with and related records of correspondence are listed in Appendix A.

1.4.3 Other Agency Consultations

Per the requirements of Section 7 of the Endangered Species Act and implementing regulations, IPaC reports were generated to determine which species and critical habitats may be present within the action area. Further consultation with the Agency was not required and JBLE-Langley Natural Resource's Manager confirmed the Proposed Action Area is not likely to be a suitable habitat for breeding or migrating birds.

As part of the state agency review discussed in Section 1.5, the Virginia Department of Historic Resources, which is the State Historic Preservation Officer (SHPO), reviewed this EA and requested JBLE-Langley consult directly to satisfy Section 106 of the NHPA and implementing regulations (36 CFR Part 800). Completion of Section 106 review with the SHPO is required to determine if there are any adverse effects on historic properties. The Section 106 review is complete and indicates no further identification efforts are warranted (Appendix A).

Correspondence regarding the findings and concurrence and resolution of any adverse effect is included in Appendix A.

1.5 PUBLIC AND AGENCY REVIEW OF EA

Because the Proposed Action area coincides with floodplains, it is subject to the requirements and objectives of EO 11988, Floodplain Management as amended by EO 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input. The Air Force published early notice that the proposed action would occur in a floodplain in the newspaper of record (listed below) on May 23-24, 2021, as part of the ISR ADP Campus EA (Appendix A). (Locating the LMOC Master Node Facility within the ISR ADP Campus was an initial alternative location considered.) No public comments were received. A second public notice which also included language announcing that the proposed action would occur in a floodplain was published on January 22-23, 2023

Environmental Assessment
Purpose of and Need for the Proposed Action

LMOC Master Facility Node JBLE-Langley AFB, VA

in the same paper and included with the Notice of Availability (NOA). This public notice also solicited public comment on the proposed action and any practicable alternatives. The comment period for public and agency input on this project extended to The NOA of the Draft EA and FONSI/FONPA was published in the newspapers of record (listed below) and invited the public to review and comment on the Draft EA. The NOA and agency comments are provided in Appendix A. No public comments were received.

The NOA and early notice of project execution in a floodplain was published in the following newspaper: The Daily Press, Newport News, Virginia (VA).

Copies of the Draft EA and FONSI/FONPA were also made available for review on-line at: https://www.jble.af.mil/About-Us/Units/Langley-AFB/Langley-Environmental/ and at the following locations:

Bateman Library (BLDG 161)	Hampton Library	Poquoson Library
42 Ash Avenue	4207 Victoria Boulevard	500 City Hall Avenue
Langley AFB, VA 23665	Hampton, VA 23669	Poquoson, VA 23662

1.6 DECISION TO BE MADE

The EA evaluates whether the proposed action would result in significant impacts on the human environment. If significant impacts are identified, JBLE-Langley would undertake mitigation to reduce impacts to below the level of significance, undertake the preparation of an EIS addressing the proposed action, or abandon the proposed action.

2.0 DESCRIPTION OF THE PROPOSED ACTION AND ALTERNATIVES

2.1 PROPOSED ACTION

The Proposed Action is to construct an LMOC Master Node Facility. This general construction project evaluates project alternatives separately. This project is based on the anticipated activities as outlined in the LMOC CCD (Urban Collaborative, 2020), which includes initiatives for facility construction; infrastructure improvements and construction; and demolition. Figure 2.1 illustrates the location on JBLE-Langley for the Proposed Action.

2.2 SELECTION STANDARDS FOR PROJECT ALTERNATIVES

The scope and location of the Proposed Action and, where applicable, alternatives, have undergone extensive review by JBLE-Langley, Master Planning Division under the direction of U.S. Army Engineering and Support, Huntsville, the 633d Civil Engineering Squadron personnel, local government agencies, and supporting installation and Air Force staff specialists.

Potential alternatives to the Proposed Action were each evaluated based on four universal selection standards, which were applied to all alternatives. The Proposed Action included selection standards applicable solely to that single project; project-specific selection standards are introduced in Section 2.3.1, where applicable.

Standard 1: The alternative(s) must meet the purpose of the Proposed Actions, to remedy deficiencies in the infrastructure of JBLE-Langley. The alternative(s) must also address the need to provide and maintain infrastructure that is adequate to support the installation's mission and applicable Air Force, State, and Federal requirements. It must also satisfy the purpose of and need for each project (see Sections 1.2 and 1.3).

Standard 2: The alternative(s) must make as much use as possible of existing land and facilities, avoid creating or maintaining redundant space or infrastructure, avoid or minimize operational inefficiencies, and represent the most cost-effective and sustainable alternative.

Standard 3: The alternative(s) must be consistent with the Regulating Plan zoning requirements, applicable installation architectural compatibility guides, and relevant legal and regulatory requirements, and must accommodate applicable, known man-made and natural development constraints (e.g., explosive quantity-safety distances, imaginary surfaces associated with the installation's runways, wetlands - the relevant constraints may vary depending on the project).

Standard 4: The alternative(s) must maintain or improve the quality of life enjoyed by personnel and dependents at JBLE-Langley.

Planning initiatives and site analysis detailed in the JBLE LMOC CCD (Urban Collaborative, 2020), evaluated 13 separate locations for siting the LMOC. Ten of the sites are located on the flightline side of the installation, and three sites are in the ISR Campus Area. Each potential building site was fully evaluated to consider:

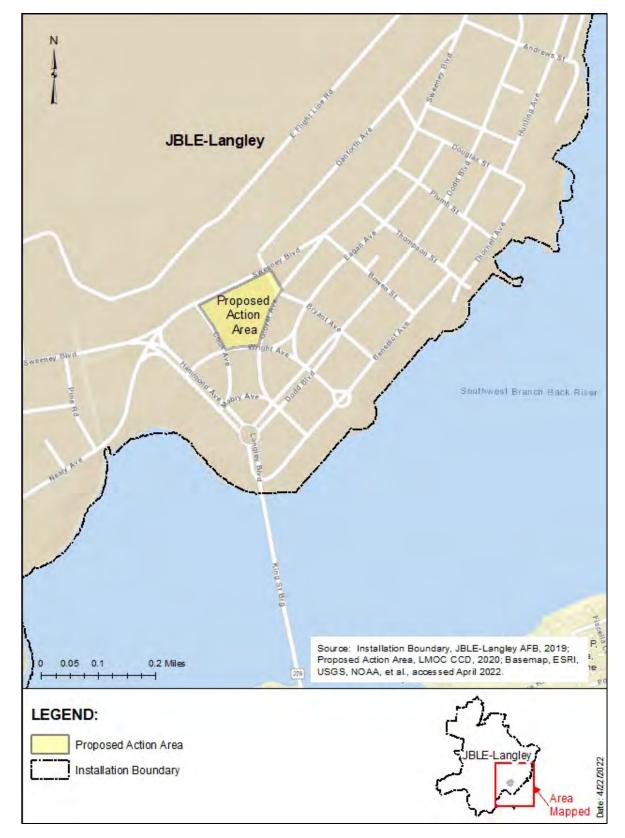

Figure 2.1: Location on JBLE-Langley for the Proposed Action AFB

Environmental Assessment
Description of the Proposed Action and Alternatives_

LMOC Master Facility Node JBLE-Langley AFB, VA

operational, natural, environmental, built/historic buildings, location of archaeological sites, capacity opportunities, sustainability development indicators, energy use, asset optimization and space use, Major Command (MAJCOM) and tenant initiatives, and mission requirements. As part of the JLBE-Langley LMOC site analysis, stakeholders assigned each potential site a weighted COA score. A brief description of alternate building sites evaluated, their COA score, and development constraints are summarized here:

Alternative Site Analysis: Flightline ADP COAs:

- 1. **1 MXG, 1 MXS Replacement (Bldg 751)** (72%). This site has been occupied for 10 years, is a little remote, and requires raising to 10.5 ft. above sea level.
- 2. **733 LRS Site (Bldg 777)** (75%). The timing/phasing of this project effects other existing buildings and includes a loss of parking for future development. There are also airfield constraints related to noise (greater than 85 dBA) and it is adjacent to an environmental restoration site. This building is also a historical structure and is located within the explosive safety quantity distance (ESQD) arc. Meeting anti-terrorism (AT) standoff distances is also a constraint.
- 3. **SFS Site (Bldg 775)** (76%) The timing/phasing of this project effects other existing buildings and includes a loss of parking for future development. There are also airfield constraints related to noise (greater than 85 dBA) and it is within the runway transitional surface. The site is adjacent to an environmental restoration site, is identified as a historical structure, and is located within the ESQD arc. Meeting AT standoff distances would also be a challenge given the limited, developable area.
- 4. **192 Wing HQ (Temp)** (78%) (preferred alternative for Flightline ADP COAs). This site is not technically within the South Flightline District. There are existing plans for Credit Union that requires demolition for the proposed action.
- 5. **Hammond Ave & Sweeney Blvd** (76%). This site does not support the IDP, is not technically within the South Flightline District, and would be a longer walk so some people will drive. This site also includes known archeological sites and has development constraints related to AT standoff distances.
- 6. **1 MXG Site (Bldg 763)** (76%). This site does not support Flightline South ADP and would be a longer walk, so some people will drive. This site has constraints related to AT standoff distances which would be difficult to meet due to limited space for future development and is also located within an existing environmental restoration site.
- 7. **633 CES Site (Bldg 367)** (70%). This site does not support Flightline South ADP, is not easily walkable, and requires demolition of fuel tanks.
- 8. **ACC Site (Bldg 368)** (63%). This site does not support Flightline South ADP, is not easily walkable, and requires demolition of fuel tanks.
- 9. **Outdoor Recreation Relocation** (53%). This is a small site, not walkable, and technically not within the Flightline South District.

10. **633 CES Site (Bldg 328)** (60%). This site has height restrictions, is not walkable, and does not support Flightline South ADP.

The final determining factor for the flightline ADP COAs was the proximity to the flightline. Site 4, the 192 Wing HQ was selected for further detailed site analysis.

Alternative Site Analysis: ISR Site COAs:

- 1. **South Quad East** (69%). This site is far from the gate, requires slow vehicle speeds (15 mph), is subject to aircraft noise, and is far from food options.
- 2. **South Quad West** (69%). This site is far from the gate, requires slow vehicle speeds (15 mph), is subject to aircraft noise, and is far from food options.
- 3. **North Quad, next to DGSX** (75%) (preferred alternative for ISR Site COAs). This site is farther from the flightline than the East and West Quads, is far from food options, and is far from a gate.

Site 3, the North Quad, was selected for further detailed site analysis from the ISR Site COAs.

Ultimately, the planning team developed two detailed site plans for both preferred locations. Additional site analysis criteria and strategic LMOC planning goals were established to include:

- Proximity to Fighter Town
- Minimal Existing Conflicts
- Minimal Impact to ADP
- Minimal Impact to IDP
- Minimal Impact to Parking
- On Flightline Side
- Builds Out ADP
- Room To Expand
- No Building Demolition Required
- No Parking Demolition Required
- Central Location on Flightline

It was decided that the most important criteria for the LMOC facility is **Proximity to Fighter Town**; this ensures the facility will benefit from local operators. The **flightline-side COA**, **Site 4** was selected as the preferred alternative (Urban Collaborative, 2020). The other 12 alternate locations were removed from further consideration. Leaving the Proposed Action (preferred alternative) or the No Action Alternative.

2.3 PROPOSED ACTION AND ALTERNATIVES

The NEPA and the CEQ regulations mandate the consideration of reasonable alternatives to the proposed actions. "Reasonable alternatives" are those that also could be utilized to meet the purpose of and need for each proposed action.

Environmental Assessment
Description of the Proposed Action and Alternatives_

LMOC Master Facility Node JBLE-Langley AFB, VA

The NEPA process is intended to support flexible, informed decision-making; the analysis provided by this EA and feedback from the public and other agencies will inform decisions made about whether, when, and how to execute the proposed actions. Among the alternatives evaluated for each project is a No-Action alternative. The No-Action alternative will substantively analyze the consequences of not undertaking the proposed action, not simply conclude no impact, and will serve to establish a comparative baseline for analysis.

The scope, location, and objectives of the proposed action is described here. This section also presents reasonable and practicable alternatives, for projects where multiple viable courses of action exist. Those alternatives are assessed relative to the universal selection standards and project-specific selection standards, where applicable. Alternatives that met all four selection standards were considered reasonable and retained for consideration in this EA. Alternatives that did not meet one or more of the standards were considered unreasonable and are not retained for consideration in the EA.

2.3.1 Facility Construction Project

Project C1: LMOC Master Node Facility Construction

Under this project, general construction, infrastructure improvement, and building and park area demolition activities would occur to support the development of the LMOC Master Node Facility. The new building would be constructed to be above the known flood zone and in accordance with UFC 3-201-01 [USACE et al, 2021b]. Construction of the building would include site preparation, a concrete foundation, roof system, electrical system, and ventilation. The existing building 467 will be demolished and existing park areas demolished and improved. Supporting infrastructure improvements will be necessary. Proper off-site demolition material disposal would be completed. Materials would be recycled to the fullest extent possible, and all trucks used to haul materials would be covered to prevent materials from littering roadways and surrounding areas. Debris not reused, recycled, or considered as inert waste would be disposed in an appropriate, local landfill. After demolition, the land would be developed or landscaped to support the specific mission for which the area would be used. Any utilities to these structures would be disconnected prior to demolition and new utilities would comply with the regulating plan. Improvements to existing roads and the construction of new roads are also under evaluation to support anticipated traffic flow, mitigate safety hazards, and to support future revenue generating projects. The proposed project map is shown in Figure 2.2.

Figure 2.2: Proposed Project Map

Environmental Assessment
Description of the Proposed Action and Alternatives_

LMOC Master Facility Node JBLE-Langley AFB, VA

Additional Project-Specific Selection Standards: Alternate site locations were scored according to the goals identified during the LMOC CCD workshop:

- Proximity to Fighter Town
- Minimal Existing Conflicts
- Minimal Impact to ADP
- Minimal Impact to IDP
- Minimal Impact to Parking
- On Flightline Side
- Builds Out ADP
- Room To Expand
- No Building Demolition Required
- No Parking Demolition Required
- Central Location on Flightline

Alternatives Considered but Eliminated from Further Analysis: Detailed in section 2.2, a total of 13 alternate sites were evaluated as possibilities to construct the LMOC Master Node Facility. Ten of the sites evaluated were situated in the vicinity of the south flightline area, while three sites evaluated were within the North Base District where the ISR campus is emerging. Major and minor planning constraints including operational, natural and environmental, built/historic buildings, and archaeological sites were considered. Installation capacity opportunities, sustainability development indicators, energy use, asset optimization and space use, MAJCOM and tenant initiatives, and mission requirements were also considered. As a result of the site analysis, building 467 (the site of the current credit union located just south of the south flightline district), was selected as the best location to construct the LMOC Master Node Facility. This district met the initial screening Standards 1 – 4 and scored the highest on the additional project-specific selection standards established as part of the LMOC CCD workshop. Therefore, the other twelve site locations were not analyzed further.

Alternatives Considered for this Project:

No-Action Alternative C1: Under the No-Action Alternative, this project would not be implemented resulting in no change in the status quo. The existing facility would continue to be maintained but the infrastructure to support the 480th and 363d ISRW would no longer be adequate. This is considered unreasonable and does not meet Standards 1 - 4. The No-Action Alternative will be carried forward for further analysis, consistent with CEQ regulations, to provide a baseline against which the impacts of the action alternative can be assessed.

LMOC Master Facility Node JBLE-Langley AFB, VA

3.0 AFFECTED ENVIRONMENT

The ROI for the Proposed Action is JBLE-Langley, unless otherwise specified below for a particular resource area where a resource would have a different ROI.

3.1 SCOPE OF THE ANALYSIS

This chapter describes the current conditions of the environmental resources, either man-made or natural, that would be impacted by implementing the Preferred Alternative or the No Action Alternative.

Based on the scope of the Proposed Action, resource areas with minimal or no impacts were identified through a preliminary screening process. The following describes those resource areas not carried forward for a detailed analysis, along with the rationale for their elimination.

Regardless of the alternative selected, the following resources have been previously evaluated in the Final Environmental Assessment for Installation Development at Joint Base Langley-Eustis, VA (JBLE-Langley, 2016). There has also been recent applicable analysis performed in the "Environmental Impact Statement (EIS) Fifth Generation Formal Training Unit Optimization" (USACE et al., 2021). The proposed action is similar in context with the proposed actions in the 2016 EA, with construction and demolition as the focal action with additional appropriate correlation with some activities within the EIS. In the spirit of 32 CFR § 989.10, § 989.14 and the "Instructions for Use of the EA Template Air Force Environmental Assessments", if a resource is not impacted or has been found to have only minor impacts in previously completed environmental analyses, the source document should be cited, and no further discussion is needed.

As a result of the preliminary EIAP analysis, the Proposed Action was determined to have no effect on several resources; therefore, these resources were eliminated from detailed analysis in this EA. The resources that were eliminated from detailed analysis and the rationale for their elimination are presented in the subsections below:

Aesthetics and Visual Resources

Aesthetics and Visual Resources are fully analyzed within the referenced 2016 EA. Criteria used to determine if a significant impact to this resource area exists include having a substantial adverse impact on a scenic vista or viewshed; substantially damaging scenic resources, including, but not limited to, primary/secondary ridgelines, trees, rock outcroppings, and historic buildings; substantially degrading the existing visual character or quality of the site and its surroundings; or, create a new source of substantial light or glare that would adversely impact day or nighttime views in the area. The proposed LMOC facility is planned to be located in an area with existing buildings and car parks but is located in the JBLE-Langley Historic District. Smaller parking lots enhance the visual environment by increasing the ratio of landscaped area to paved area and allowing more conformance to natural topography. Parking lots between and behind buildings can reduce the visual impact from the circulation system and increase pedestrian access from walkway systems. The new LMOC Facility will be an improvement over current conditions since large, existing parking lots (one, 193-car park and one 168-car park), will be demolished and replaced with a smaller, 181-car park and the building façade will be placed along the

Environmental Assessment Affected Environment_____

LMOC Master Facility Node JBLE-Langley AFB, VA

primary vehicle routes. The Proposed Action has satisfied all Section 106 requirements and considered building activities within a historic district.

Biological/Natural Resources

Special species status was verified using US Fish and Wildlife Information for Planning and Consultation (IPaC) report generated on May 10, 2023. The three species on this list and their status include the endangered northern long-eared bat (*Myotis septentrionalis*); the proposed endangered tricolored bat (*Perimyotis subflavus*); and one candidate species, the monarch butterfly (*Danaus plexippus*). No critical habitat, refuge lands, or fish hatcheries exist in the Proposed Project Area. The May 10, 2023 verification ensured consistency between the ISR EA and the referenced 2016 EA, which also indicates no critical habitat, refuge lands or fish hatcheries in existence in the City of Hampton. There are no known nests within the project area.

Full analysis of the northern long-eared bat and the tricolored bat are included in the referenced 2021 JBLE-Langley EIS. The JBLE-Langley EIS concludes that the northern long-eared bat would not be affected by land disturbance or new construction activities and the tricolored bats are likely transitory individuals (at the Installation) and not likely to be affected by the proposed construction activities. Though the northern long-eared bat may occur in cavities and crevices of large live and dead trees during the summer and in winter hibernating in caves and mines, no evidence of winter hibernation or summer roosts have been observed on JBLE-Langley Main Base (USACE et al., 2021). However, the 2021 JBLE-Langley INRMP indicates the presence of lactating tricolored bats present and breeding at the Big Bethel Reservoir (which is approximately 5 miles from the Proposed Action Area). A more comprehensive land use study and management plan for bats at Big Bethel Reservoir is programmed for 2023. There are no known tricolored bats roosts or maternity colonies at JBLE-Langley Main Base. Therefore, it is unlikely that the tricolored bats would be adversely impacted as a result of the Proposed Action.

The candidate species monarch butterfly is also unlikely to be impacted since the proposed action occurs within an already built-up area.

Bird species protected by the Migratory Bird Treaty Act (hereafter referred to as migratory birds) may be present within the Proposed Action Area. The IPaC report identifies 20 birds of conservation concern. JBLE-Langley maintains a Bird/wildlife-Aircraft Strike Hazard (BASH) prevention program to manage risks for military aircraft, pilots, and injury or death to birds and other wildlife. As part of the BASH program, the time during the year when peak bird migration activity occurs is identified and mitigating measures are outlined. Implementation of the Proposed Action would adhere to the BASH prevention program and would implement mitigating techniques to help reduce threats to any migratory birds. If any active nests (eggs, fledglings, etc.) were discovered in the Proposed Action Area, work would stop and the JBLE-Langley Natural Resources Manager would be contacted. Accordingly, significant adverse impacts on migratory birds is unlikely.

The 2021 JBLE-Langley INRMP indicates that while monitoring for both currently listed and newly listed species is ongoing, no new rare, threatened, or endangered species have been observed or documented. Consultations with JBLE-Langley's Natural Resource Program Manager also indicates that with respect to migratory birds, the habitat in the Proposed Action Area is not suitable for nesting for most species listed in the IPaC report; there is a potential for the wood thrush to nest in nearby trees, but all potential nesting areas are not specifically tracked. For these reasons, it is anticipated that the Proposed Action would have no appreciable effect on Natural Resources.

LMOC Master Facility Node JBLE-Langley AFB, VA

Earth Resources

Geology. The Proposed Action would not involve any activity that would adversely affect subsurface geological formations. The development of the LMOC Facility including construction and demolition activities, would be conducted using standard methods that would have no appreciable impact on geology. Excavation is expected to be conducted only to depths necessary for the facility foundations and utility connections. For these reasons, the Proposed Action would have no appreciable effect on geology.

Soils. Because the Proposed Action will be conducted in an already built-up area, adverse effects on soils will not occur. Construction activities would not be conducted during periods of wet weather and would be staged to allow for stabilization of disturbed soils. Fugitive dust control techniques, such as watering and stockpiling, would be implemented to minimize adverse impacts and would comply with applicable regulations.

Topography. The topography where the Proposed Action will occur is relatively flat, since there are substantial parking lots present. There is greater slope outside of the existing parking lots, but current plans avoid substantial activity in those areas due to increased expenses constructing in greater slope areas. Buildings will therefore not be built on a highly sloped site so the finished floor elevation will not impact the surrounding topography.

Safety and Occupational Health

Ground Safety. Ground safety related to the Proposed Action would include mishaps related to the use of construction equipment and motor vehicle use or maintenance functions. Compliance with applicable AF Safety Manuals and Mishap Response Plans would be implemented. The Proposed Action is not in a clear zone or accident potential zone so this increases protection of people and property on the ground. For these reasons, the Proposed Action would have no appreciable effect on Ground Safety.

Explosives Safety. The Proposed Action will be conducted in an area that is not used for munition storage or handling and is not located within the Quantity Distance (QD) Arcs, which mark the impact of munitions. For these reasons, the Proposed Action would have no appreciable effect on Explosives Safety.

Flight Safety. The Proposed Action does not include flight activities but there is a potential for aircraft mishaps during flight that might indirectly have an effect on the safety of the public. However, because the Proposed Action is located outside of the clear zones, accident prevention zones, and QD arc, the potential for flight operations to indirectly effect public safety is reduced greatly. The Proposed Action will be in compliance with the regulating plan which describes building height restrictions to minimize collisions with manmade structures and describes methods to reduce hazardous bird/wildlife activity relative to airport flight operations. For these reasons, the Proposed Action would have no appreciable effect on Flight Safety.

Land Use

The Proposed Action is planned in an area that is already built up and disturbed by past development. The Regulating Plan provides flex-use functions on this site (prohibiting industrial or housing). The general construction and demolition activities would occur only within areas that correlate with compatible land use types or may be permitted with specific restrictions to ensure that development

Environmental Assessment Affected Environment_____

LMOC Master Facility Node JBLE-Langley AFB, VA

within those areas is not disruptive to the installation's missions. For these reasons, the Proposed Action would have no appreciable effect on Land Use.

Noise

Noise generated from construction and demolition activities under the Proposed Action would temporarily increase ambient noise levels in and around the sites. However, the increased noise levels would be intermittent and limited to daytime working hours during the overall construction/demolition period. The Proposed Action would have no appreciable effect on noise.

Socioeconomics/Environmental Justice

The Proposed Action would not impact the number of persons currently working at JBLE-Langley or living in the local area. During the construction and demolition work, there would be negligible impacts on the local economy in the form of temporary construction employment opportunities. For these reasons, the Proposed Action would have no appreciable effect on the local demographics, local economy, number of persons living in on-base or off-base housing, number of children attending schools in the area, or demand for emergency services (medical, police, and firefighting).

Water Resources

Surface water. JBLE-Langley is located between the Northwest and Southwest Branches of the Back River, a tributary of Chesapeake Bay. In general, drainage for the area ultimately flows into Chesapeake Bay via the Back River, Newmarket Creek, Brick Kiln Creek, and Tabbs Creek. Other than drainage ditches associated with the existing car park(s), there are no surface water or wetlands present in the Proposed Action area. The installation's stormwater system consists primarily of drainage ditches in more undeveloped areas, and underground piping in developed areas. Compliance with applicable federal and state law will be followed to protect the nation's waters and discharge of any pollutant into any jurisdictional waters of the U.S. as defined in 40 CFR § 120.2 will be prohibited unless appropriate permitting requirements have been met. For these reasons, the Proposed Action will have no appreciable effect on surface water.

Groundwater. The three water bearing units beneath JBLE-Langley are the Water Table Aquifer, the Yorktown-Eastover Aquifer, and the Chickahominy-Piney Point Aquifer. The groundwater beneath JBLE-Langley is not a practical source of irrigation or potable water. The potable water is supplied by the City of Newport News Water Works and is ultimately sourced from the Chickahominy River. For these reasons, the Proposed Action will not impact groundwater resources.

Floodplains. The discussion of floodplains is tiered from the 2016 EA, which describes that JBLE-Langley is almost entirely within the 100-year floodplain. Given this fact, there is no other practicable alternative within the footprint of JBLE that would actually avoid the 100-year floodplain. Although the Proposed Action may have an irreversible and irretrievable impact on floodplains, the Proposed Action would only impact a small portion of the 100-year floodplain area. Additionally, the potential demolition of building 467 within the 100-year floodplain would represent a long-term, minor, beneficial effect. The Proposed Action would not have significant impacts associated with floodplains.

Coastal zone management areas (CZMA). The Virginia Department of Environmental Quality (VDEQ) is responsible for oversight and implementation of Virginia's Coastal Zone Management Program established in 1986 which is comprised of state agencies and local governments that administer enforceable laws, regulations, and policies to protect the Commonwealth's coastal resources. Federal

lands, including JBLE-Langley, are statutorily excluded from the coastal zone pursuant to Section 304 of the CZMA. CZMA requires that federal agencies be consistent with enforceable policies of state coastal zone management programs when conducting or supporting activities within or outside the coastal zone that affect land use, water use, or natural resources of the coastal zone. The Proposed Action would not have a significant impact to land use, water use, or natural resources of the coastal zone. For these reasons, the Proposed Action will not impact the CZMA but would still be subject, to the maximum extent practicable, enforceable policies of the states coastal zone management program to ensure federal consistency.

Wetlands. Wetland resources are protected under Section 404 of the Clean Water Act (CWA) (33 U.S.C. § 1344). Wetlands on federal lands are further protected under EO 11990, Protection of Wetlands, which directs agencies to "minimize the destruction, loss, or degradation of wetlands, and to preserve and enhance the natural and beneficial values of wetlands" when carrying out agency actions. The Proposed Action is planned in an area that does not contain a wetland. The general construction activities associated with the Proposed Action will occur in an area that is already built up and is currently paved. For these reasons, the Proposed Action would have no appreciable effect on wetlands. Wetland verification ensured consistency with the referenced 2022 CAR (JBLE-Langley, 2022a), the 2019 wetland delineation performed by U.S. Army Corps of Engineers (USACE) (USACE, 2019) and the National Wetlands Inventory (USFWS, 2022).

3.2 CAPACITY ANALYSIS REPORT (AFFECTED ENVIRONMENT DESCRIPTIONS)

A Capacity Analysis Report (CAR) dated January 2022 has been developed which includes the full description of the affected environments at JBLE-Langley. It provides the current conditions (baseline information), potential categorical exclusion citations, current compliance activities and criteria for determining significance for each resource area (JBLE-Langley, 2022a). The descriptions of the baseline conditions for each affected environment moving forward in analysis may be found in the CAR. The CAR is incorporated by reference in accordance with 40 CFR § 1501.12, *Incorporation by reference*, which states: "Agencies shall incorporate material, such as planning studies, analysis, or other relevant information, into environmental documents by reference when the effect will be to cut down on bulk without impeding agency and public review of the action. Agencies shall cite the incorporated material in the document and briefly describe its content." The citation further indicates the referenced documentation is required to be "reasonably available for inspection by potentially interested persons within the time allowed for comment." When finalized, the CAR will be made available at the following website: https://www.jble.af.mil/About-Us/Units/Langley-Environmental/.

The following resource areas were carried forward for analysis and are fully examined in Section 4.0, Environmental Consequences:

- Air Installation Compatible Use Zone (AICUZ) and related Encroachment.
- Air Quality: Hazardous Air Pollutants, General Conformity Rule, Greenhouse Gas Emissions.
- Cultural Resources: Archeological Sites, Architectural Resources, Traditional Cultural Properties.
- Hazardous Materials and Waste: Pollution Prevention, Environmental Restoration Program.
- Transportation.
- Infrastructure and Utilities.

4.0 ENVIRONMENTAL CONSEQUENCES

4.1 INTRODUCTION

This chapter describes the potential environmental consequences that are likely to occur as a result of implementation of both alternatives that are being considered and analyzed. With the 2020 update to the federal NEPA regulations, a simpler, more flexible approach for agencies to assess significance was implemented. Reference to "context" was updated to "potentially affected environment", and "intensity" to "degree". In considering the degree of the effects, agencies should consider both shortand long-term effects of the proposed action. Beneficial and adverse effects, effects on public health and safety, and any effects that would potentially violate Federal, State, Tribal, or local law should all be considered, with an emphasis on protecting the environment (40 CFR 1501.3).

Impacts described in this chapter are evaluated in terms of type (positive/beneficial or adverse), context (setting or location), intensity (none, negligible, minor, moderate, severe), and duration (short-term/temporary or long-term/permanent). The type, context, and intensity of an impact are explained under each resource area. Unless otherwise noted, short-term impacts are those that would result from the activities associated with a project's construction and/or demolition phase, and that would end upon the completion of those phases. Long-term impacts are generally those resulting from the operation of a proposed project.

As indicated is Section 3.2, the baseline conditions for each of the following affected environments may be found in the CAR. The CAR includes the criteria being used to help determine significance. The criteria are also provided here for convenient reference.

4.2 AIR INSTALLATION COMPATIBLE USE ZONE (AICUZ)

4.2.1 AICUZ

Evaluation criteria used to determine significance includes:

 Activities that would result in non-compliance with the Department of Defense Instruction Manual Number 4165.57 USD(A&S). Air Installations Compatible Use Zones (AICUZ), May 2, 2011, Updated August 31, 2018.

Proposed Action.

The proposed action is located outside of the clear and accident potential zones. However, it is possible that temporary and minor adverse hazards to the aircraft flight zone may occur. This is primarily related to temporary generation of smoke, steam, or dust because of the expected general construction activities. To mitigate the potential impact, project applicants will coordinate with the AICUZ Program administrators to ensure that the project is compatible with installation operations relative to these concerns. Therefore, there are no anticipated significant impacts due to the proposed action to the AICUZ areas.

No Action Alternative.

With the No Action Alternative the LMOC Facility development would not occur. Related construction changes at JBLE-Langley would not occur and therefore, no impact.

4.2.2 Encroachment

Proposed Action.

The proposed action will be carried out within the overall footprint of JBLE-Langley at the southwest intersection of Sweeney Boulevard and Bryant Avenue just south of the South Flightline District and within the Heavier-Than-Air District. This area is within the JBLE-Langley Historic District and is situated in an area that is already built-up and includes mixed-use industrial, open space, administrative, and community service land use types. Therefore, there are no anticipated encroachment issues associated with the proposed action. Compatible land-use development and support of local, long-range land-use planning efforts are in accordance with nationally recognized standards and the AICUZ program. Therefore, there are no anticipated significant impacts related to encroachment that would affect the AICUZ areas.

No Action Alternative.

With the No Action Alternative the LMOC Facility development would not occur. Related personnel or construction changes at JBLE-Langley would not occur and therefore, no impact.

4.3 AIR QUALITY

Evaluation criteria used to determine significance includes activities that would:

- Increase ambient air pollution above any National Ambient Air Quality Standards (NAAQS);
- Contribute to an existing violation of any NAAQS;
- Interfere with or delay timely attainment of NAAQS;
- Expose people to HAPs in large quantities;
- Results in a substantial increase in the base's potential to emit Green House Gases (GHGs); or
- Result in a substantial increase in the base's potential to emit GHGs.

Proposed Action.

Implementation of the Proposed Action would have short-term, negligible, adverse impacts to air quality primarily from general construction activity. Air emissions from general construction activities would be temporary and brief in duration. Criteria pollutant air emissions would be produced from the combustion of fuels in heavy equipment. Particulate matter air emissions, such as fugitive dust, would be produced from ground-disturbing activities and from the combustion of fuels in heavy equipment. Fugitive dust air emissions would be greatest during the initial site preparation and would vary from day to day depending on the work phase, level of activity, and prevailing weather conditions. The quantity of uncontrolled fugitive dust emissions from a construction site is proportional to the area of land being

worked and the level of activity. Construction would incorporate best management practices (BMPs) and environmental control measures to minimize fugitive particulate matter air emissions. Additionally, the work vehicles are assumed to be well maintained and should use diesel particulate filters to reduce particulate matter air emissions. Construction workers commuting daily to and from the job sites in their personal vehicles would also result in criteria pollutant air emissions. HAP emissions associated with these activities would result from internal combustion engines and would be *de minimis*. **Appendix C** contains a summary of potential air emissions associated with the general construction activities.

As stated previously, the installation is in an area that has been designated as unclassified/attainment for all criteria pollutants. As Appendix C indicates, estimated annual air emissions from the Proposed Action throughout the anticipated duration is well below *de minimis* threshold limits; therefore, a General Conformity determination would not be required.

The Proposed Action would emit GHGs from the combustion of fossil fuels. Construction would generate approximately 680.12 metric tons per year (tpy) of CO2e during the project (9 months), but there would not be any continuing emissions. This GHG emission is approximately 2.72 percent of the CEQ reference point of 25,000 metric tpy (40 CFR § 98.2), below which a quantitative analysis of GHGs is not necessary. This is a negligible amount with respect to the existing conditions. These limited annual emissions of GHGs would not likely contribute to global climate change to any discernible extent. Potential changes to local temperature and precipitation patterns as a result of ongoing global climate change would not affect the ability to implement the Proposed Action.

Overall, there would be no significant impact to air quality with implementation of the Proposed Action.

No Action Alternative.

Implementation of the No Action Alternative would have no significant impacts to regional or local air quality as existing conditions would remain the same.

4.4 CULTURAL RESOURCES

36 CFR §800.16 establishes the Area of Potential Effect (APE) as the geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties (a prehistoric or historic district, site, building, structure, or object). The effect means alteration to the characteristics of a historic property qualifying it for inclusion in or eligibility for the National Register of Historic Places (NRHP). National Park Service (NPS) guidance outlines seven aspects of integrity to help evaluate eligibility and determine whether a property's character is adversely affected. They are the historic property's location, setting, design, materials, workmanship, feeling, or association. An effect is considered adverse when it diminishes one or more aspects of integrity. A "significant impact" under NEPA is defined as an unresolvable "adverse effect" under Section 106 of the NHPA. Although the potential for adverse effects to cultural resources was evaluated by the 2016 Installation Development EA, the proposed action area buildings were further evaluated for their NRHP status.

The CRM reviewed all proposed actions and identified those which may have an effect on cultural resources. The findings were coordinated with the SHPO. The information gathered from the CRM/SHPO review was used to determine the significance of impact as defined by NEPA.

LMOC Master Facility Node JBLE-Langley AFB, VA

Proposed Action.

Implementation of the Proposed Action is not likely to affect archeological resources. A small portion of archaeological site 44HT98 is located in the western most part of the proposed action area (JBLE-Langley, 2019). According to the Integrated Cultural Resources Management Plan (ICRMP), this site is not eligible for NRHP and is recommended for no further work. However, if previously unidentified archaeological resources are discovered during the Proposed Action, work should cease, and JBLE-Langley should coordinate with the CRM, SHPO, and appropriate Native American tribes (if required) to avoid or mitigate potential effects (see ICRMP Standard Operating Procedures [JBLE-Langley, 2019]). However, given the extent of previous investigations, no significant impacts to the archeological resources are anticipated from implementation of the Proposed Action.

Implementation of the Proposed Action is not likely to have an effect on above-ground resources located within its footprint and viewshed. There is one building in the APE described as MUHJ 467, Credit Union. It was constructed in 1982 and on 13 May 1997 was determined to be not eligible for the NRHP. It is currently scheduled for demolition as part of the Proposed Action. However, the effect of the undertaking on the integrity of the historic district as a whole required Section 106 evaluation to determine whether there are adverse effects and subsequently significant impacts. DHR concurs with the Air Force's "No Adverse Effect" determination (Appendix A). Should unidentified historic properties be discovered during implementation of the project, DHR must be notified. There is no potential for significant adverse impact.

No Action Alternative.

Implementation of the No Action Alternative would have no significant impacts on cultural resources as the area would remain in its current state.

4.5 HAZARDOUS MATERIALS AND WASTE

Evaluation criteria used to determine significance includes:

- The generation of a new waste stream that cannot be immediately or safely managed under existing protocols;
- The generation of an excessive quantity of waste that cannot be adequately or safely managed in accordance with the JBLE-Langley 633d Air Base Wing Environmental Special Conditions (JBLE-Langley, 2020) document and/or project specific plans;
- Non-compliance with site-specific land use controls; or
- Non-compliance with site-specific Records of Decision/Decision Documents.

Proposed Action.

No impact is anticipated due to the handling, use, storage or disposal of hazardous materials hazardous waste, or solid waste. Implementation of the proposed action is expected to generate negligible amounts of demolition waste. At this stage in planning, there is no known risk of radon, asbestoscontaining materials or lead based paint-containing materials in buildings that may be demolished. Project-specific safety plans will address the safe handling and disposal of those potential hazards. Hazardous material use should be minimal, with the use of consumable fuel in construction vehicles.

FINAL ENVIRONMENTAL ASSESSMENT

Environmental Assessment Environmental Consequences

LMOC Master Facility Node JBLE-Langley AFB, VA

The contractor is subject to the guidelines set forth in the JBLE-Langley 633d Air Base Wing Environmental Special Conditions document, the requirements of which are written into each contract and dictates the procurement of permits, the development of planning documents, reporting, and appropriate handling and disposal of hazardous materials, hazardous waste and solid waste. The details for the contractual requirements are found in this document (JBLE-Langley, 2020). There are no anticipated significant impacts due to the proposed action and the handling, use, storage or disposal of hazardous materials, hazardous waste or solid waste.

There will be no construction conducted on Installation Restoration Program (IRP) sites that have current land use controls or any active investigation or clean-up activities. The only site in the APE is a portion of closed site ST-27. According to the Final Decision Document IRP Site ST-27 is a former petroleum, oil, and lubricant (POL) Site that has been eliminated through the proper remedial and/or closure of the former JP-4 fuel transfer line which it was associated with. The installation of a free-product collection system, and subsequent characterization of the affected media adjacent to a portion of the former fuel transfer line resulted in a recommendation of no further action (NFA) under a continued industrial use or a future residential use scenario. There is no potential for a future release at this site since the petroleum-hydrocarbon source (i.e., the former JP-4 fuel transfer pipeline) has been removed from the site (IT Corp., 2020). Therefore, there are no anticipated significant impacts due to the proposed action related to this site.

At this stage in planning, details of pollution prevention are not known, however, as per the JBLE-Langley 633d Air Base Wing Environmental Special Conditions document, the contractor would be required to report the usage of all hazardous materials to the Federal Government for all projects and contracts. Stormwater pollution prevention plans are also required (JBLE-Langley, 2016).

No Action Alternative.

Implementation of the No Action Alternative would have no significant impacts on Hazardous Materials and Waste as the area would remain in its current state.

4.6 TRANSPORTATION

Evaluation criteria used to determine significance includes:

- Impacts that would increase traffic on the installation and local roads in such a way that they would not be able to accommodate the additional vehicles;
- Impacts that do not comply with local, state, or Federal laws and regulations; or,
- Impacts that constitute a substantial risk to human health or the environment.

Proposed Action.

Implementation of the Proposed Action would result in moderate, long-term beneficial impact to traffic and transportation. Specific transportation and infrastructure improvements planned include converting Bryant Avenue to a short boulevard connecting Sweeney and Glover Avenue. The plan also includes a new boulevard connecting Cook Avenue to Glover Avenue, providing access to a 181-space car park. A 40 percent reduction for alternative transportation is expected as a result of the improvements (Urban Collaborative, 2020). The current plans also allow walkable access for the pilots

FINAL ENVIRONMENTAL ASSESSMENT

Environmental Assessment Environmental Consequences

LMOC Master Facility Node JBLE-Langley AFB, VA

stationed at JBLE-Langley, who will take advantage of the LMOC's mission planning capabilities. There would be minor increases in traffic due to general construction activities that would be temporary. Therefore, the Proposed Action would result in moderate, long-term beneficial impact to pedestrian foot traffic, vehicular traffic, and transportation. There will be no significant impact on Transportation resources as a result of the Proposed Activity.

No Action Alternative.

Under the No Action Alternative, a new LMOC Facility would not be constructed, Building 467 would not be demolished, and transportation and infrastructure improvements would not occur. Therefore, the No Action Alternative would have no effect on transportation resources. There will be no significant impact.

4.7 INFRASTRUCTURE AND UTILITIES

The following thresholds were used to determine if an impact to utilities would be significant:

- Impacts would increase demands on utility systems in such a way that existing systems cannot accommodate those demands; or
- Impacts do not comply with local, state, or Federal laws and regulations.

Proposed Action.

Implementation of the Proposed Action would have a short-term, negligible effect on utilities planned for demolition, but would provide moderate, long-term beneficial impacts after the proposed utility upgrades are complete. To support the future LMOC, the two storm-water drainage lines running east-west north of Building 467 would need to be diverted. However, the electric line along Sweeney Boulevard would be avoided and will support the new building. During the construction activity, there is little to no concern that the current utility structure surrounding the APE will be negatively impacted. Even if potable water is used by the construction workers, there is still ample capacity to avoid impact. Communication lines in the area would be improved as planned and would also provide moderate, long-term beneficial impacts. All improvements will meet future development needs. There will be no significant impact.

No Action Alternative.

Under the No Action Alternative, a new LMOC Facility would not be constructed, Building 467 would not be demolished, and infrastructure and utility improvements would not occur. Therefore, the No Action Alternative would have no effect on infrastructure and utility resources. There will be no significant impact.

4.8 OTHER NEPA CONSIDERATIONS

4.8.1 Unavoidable Adverse Effects

This EA identifies any unavoidable adverse impacts that would be required to implement the Proposed Action and the significance of the potential impacts to resources and issues. Title 40 of the *Code of Federal Regulations* § 1501.3(b)(1) and (2) specifies that a determination of significance requires consideration of the potentially affected environment and the degree of the effects of the action.

Unavoidable adverse effects would result from implementation of the Proposed Action. As discussed in Section 4, the Proposed Action would result in short-term, adverse effects associated with construction and potential demolition activities, including increased noise and air emissions, AICUZ (due to temporary generation of smoke, steam, or dust because of the expected general construction activities), minor increases in traffic, use and generation of hazardous materials and wastes and generation of negligible amounts of construction waste. None of these effects would be significant. All activities of the Proposed Action would occur within the 100-year floodplain. As most of JBLE-Langley occurs within the floodplain, there would be no practicable alternative.

Construction projects would have long-term, negligible, impacts to the floodplain. All new buildings must be constructed with a Finished Floor Elevation (FFE) of 10.9 feet or higher in order to be above the known floodzone. Demolition of building 467 at JBLE-Langley, if undertaken, would have a long-term, negligible, beneficial impact to the floodplain.

For the Proposed Action to be accomplished, these impacts will occur. The action is required because a facility is needed to support JBLE-Langley's Live Mission Operation Capabilities and it can further be used as a prototype for other LMOC Master Node Facilities to support the Air Force throughout the US, since no LMOC facilities currently exist in the US.

4.8.2 Relationship of Short-Term Uses and Long-Term Productivity

Short-term uses of the biophysical components of human environment include direct construction-related disturbances and direct effects associated with an increase activity that occurs over a period of less than 5 years. Long-term uses of human environment are those effects occurring over a period of more than 5 years, including permanent resource loss.

The Proposed Action would not result in a change of land use in the surrounding area. Development of the Proposed Action would not represent a significant loss of open space. The long-term beneficial effects of implementing the Proposed Action would provide adequate and secure space to perform mission planning, execution, monitoring, debriefing, and administrative functions.

The potential demolition activities at JBLE-Langley would contribute to United States Air Force's (USAF) goal of removing excess, obsolete, and underused infrastructure capacity and focusing time and funding on more efficient property.

LMOC Master Facility Node JBLE-Langley AFB, VA

4.8.3 Irreversible and Irretrievable Commitments of Resources

This EA identifies any irreversible and irretrievable commitments of resources that would be involved in the Proposed Action if implemented. An irreversible effect results from the use or destruction of resources (e.g., energy) that cannot be replaced within a reasonable time. An irretrievable effect results from loss of resources (e.g., endangered species) that cannot be restored as a result of the Proposed Action. The short-term irreversible environmental commitments that would result from implementation of the Proposed Action involves the consumption of material, energy, and human resources. The use of these resources is considered to be permanent. Irreversible and irretrievable resource commitments are related to the use of nonrenewable resources and the effects that use of these resources will have on future generations. Irreversible effects primarily result from use or destruction of a specific resource that cannot be replaced within a reasonable timeframe (e.g., energy and minerals).

Floodplains. The Proposed Action would occur in the 100-year floodplain. As JBLE-Langley is almost entirely within the 100-year floodplain, there is no practicable alternative. Although the Proposed Action would have an irreversible and irretrievable impact on floodplains, the Proposed Action would only impact a small portion of the 100-year floodplain in an area that is already fully developed. Additionally, the potential demolition of buildings within the 100-year floodplain would represent a long-term, minor, beneficial effect. The Proposed Action would not have significant impacts associated with floodplains.

Material Resources. Material resources used for the Proposed Action include building materials (for construction of facilities), concrete and asphalt (for parking lots), and various material supplies (for infrastructure) and would be irreversibly lost. Most of the materials that would be consumed are not in short supply, would not limit other unrelated construction activities, and would not be considered significant.

Energy Resources. No significant effects would be expected on energy resources used as a result of the Proposed Action, though any energy resources consumed would be irretrievably lost. These include petroleum-based products (e.g., gasoline and diesel fuel) and electricity. During construction, gasoline and diesel fuel would be used for the operation of construction vehicles. During operation, gasoline or diesel fuel would be used for the operation of privately owned and government-owned vehicles. Electricity would be used by operational activities. Consumption of these energy resources would not place a significant demand on the availability of energy resources in the region.

Human Resources. The use of human resources for construction and operation is considered an irretrievable loss, only in that it would preclude such personnel from engaging in other work activities. However, the use of human resources for the Proposed Action and alternatives represent employment opportunities and is considered beneficial.

4.9 PROJECTS WITH REASONABLY FORESEEABLE AND POTENTIAL CUMULATIVE EFFECTS

This EA also considers reasonably foreseeable and potential cumulative effects with other projects as required by 40 CFR § 1508.1(g). An indirect effect, as defined by 40 CFR §1508.1(g) includes considering those effects caused by the action and are later in time or farther removed in distance, but are still

LMOC Master Facility Node JBLE-Langley AFB, VA

reasonably foreseeable. Cumulative effects are effects on the environment that result from the incremental effects of the action when added to the effects of other past, present, and reasonably foreseeable actions that occur at the same time and place as the proposed action or alternatives. Such impacts can result from individually minor but collectively significant actions taking place over a period of time.

Actions announced for the ROI for this project that could occur during the same time period as the proposed action are:

Air Force Actions

Recent past and ongoing military actions at JBLE-Langley were considered as part of the baseline or existing condition in the appropriate ROI. Each project identified in Table 4.1 was reviewed to consider the potential effects of each action in combination with the proposed action. Potential overlap in affected area and project timing were considered.

JBLE-Langley is an active military installation that experiences continuous evolution of mission and operational requirements. All projects must comply with land use controls, which include safety and environmental constraints. JBLE-Langley, like other major military installations, requires new infrastructure repairs, sustainment, and improvements. These routine projects with minimal impacts are categorically excluded from the preparation of an EA or EIS and are not considered further for reasonably foreseeable and cumulative effects. Table 4.1 lists the past, present, and reasonably foreseeable future major Air Force projects anticipated to occur on the base.

Table 4.1: Past, Present and Future Air Force Projects

FINAL ENVIRONMENTAL ASSESSMENT

Environmental Assessment Environmental Consequences LMOC Master Facility Node JBLE-Langley AFB, VA

Scheduled Project	Project Summary	Implementation Date	Relevance to Proposed Action	Potentially Affected Resources
Construct a new Live Mission Operations Capability (LMOC) Master Node Facility	The purpose of constructing a new LMOC Master Node Facility is to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions. The facility requires Sensitive Compartmentalized Information Facility (SCIF) areas, with both Special Access Program (SAP) and Top Secret/Sensitive Compartmentalized Information (TS/SCI) capabilities.	Priority installation projects are proposed to be constructed over the next 5 years.	The need to construct the facility is to provide adequate and secure space to perform mission planning, execution, monitoring, debriefing, and administrative functions.	AICUZ, Air Quality, Cultural Resources, Environmental Restoration Program, Transportation, Infrastructure and Utilities
Intelligence, Surveillance, Reconnaissance (ISR) Campus Area Development	The purpose of the ISR Campus Area Development is to support ISR activities and address planning needs for organizations throughout the installation. The ISR campus is needed to consolidate cyber functions on the installation and allow for an advancing, mixed-use development for the entire installation.	Short-term installation projects are proposed to be constructed over the next 5 years. Plans include mid- and long- range activities and capacity.	The construction projects may overlap with construction activities associated with the proposed action.	AICUZ, Air Quality, Cultural Resources, Environmental Restoration Program, Safety and Occupational Health, Transportation, Infrastructure and utilities, and wetlands.
Fifth Generation Formal Training Unit Optimization	Permanent beddown of the F-22 Formal Training Unit (FTU)	Fall 2021	Construction may overlap with the proposed action	Air Quality, Transportation, Noise, Cultural, Environmental Justice

Scheduled Project	Project Summary	Implementation Date	Relevance to Proposed Action	Potentially Affected Resources
Installation Infrastructure Capital Improvement Projects	Projects include construction, renovation, repair and demolition of infrastructure at JBLE-Langley, including a new Fuels System Maintenance Hangar and Fuels Automated System Complex, internal renovations of aircraft maintenance hangars, administrative facilities, and repair/replacement/addition of transportation, parking and utility systems. A total of 371,968 ft² would eventually be constructed and 22 buildings demolished.	Ongoing	Construction may overlap with the proposed action.	Acoustic Environment, Air Quality, Socioeconomics – Income and Employment
Airfield and Drainage Projects	Projects include drainage improvements and removal of wetlands in the airfield area, construction of airfield fence, construction of a new RV parking lot near Durand Loop, and drainage improvements at Brick Kiln Creek.	2021	Construction may overlap with the proposed action.	Water Resources (Wetlands, Water Quality), Natural Resources

Notes: ADAIR = adversary air; AFB = Air Force Base; EA = Environmental Assessment; EIS = Environmental Impact Statement; FTU = formal training unit; ISR = Intelligence, Surveillance, and Reconnaissance; JBLE-Langley = Joint Base Langley-Eustis

Other Military/Government Actions

Past and ongoing military or government agency actions surrounding JBLE-Langley were considered as part of the baseline or existing condition in the appropriate ROI (Table 4.2). Each project summarized in this section was reviewed to consider the reasonably foreseeable and cumulative effects to the proposed action or alternatives. Potential overlap in the ROI and project timing were considered.

Table 4.2: Other Military/Government Actions

Airspace Management and Operations, Acoustic Environment, Safety, Biological Resources

Nonfederal Actions

Nonfederal actions such as new development or construction projects occurring in the area surrounding JBLE-Langley were evaluated to determine if reasonably foreseeable and cumulative effects exist. The JBLE-Langley is bordered by the city of Hampton to the south and west, Poquoson to the north, National Aeronautics and Space Administration (NASA) facilities to the northwest, and the Back River to the east. Developable land surrounding the installation is scarce. Zoning ordinances are in place to ensure that any future development immediately adjacent to the installation's boundaries are compatible with military aircraft operations to avoid encroachment within the installation's safety zones. As such, no future development projects surrounding JBLE-Langley are expected to result in incremental increases and therefore there is no expected effect from the proposed action.

The Hampton Roads Bridge Tunnel Expansion Project was identified as a major transportation project in the Hampton Roads area which includes widening of portions of the Interstate I-64 corridor from I-564 in Norfolk to Settlers Landing Road in Hampton. However, this project is not located in the immediate vicinity of the installation and would not directly affect access to JBLE-Langley. This nonfederal action was considered in the cumulative effects analysis for biological resources in the 2021 EIS [USACE, 2021].

For this EA analysis, these announced actions are addressed to determine if reasonably foreseeable and cumulative effects exist. These announced future actions would be evaluated under separate NEPA actions conducted by the appropriate involved federal agency. Based on the best available information for these proposals by others, the Air Force cumulative impact analysis in USACE Feb. 2021 does consider them.

FINAL ENVIRONMENTAL ASSESSMENT

Environmental Assessment Environmental Consequences LMOC Master Facility Node JBLE-Langley AFB, VA

In accordance with 32 CFR § 989.10, the Environmental Impact Statement Fifth Generation Formal Training Unit Optimization [USACE, 2021] is referenced to provide current (2021) cumulative effect analysis of the past, present and future actions described.

Descriptions of the reasonably foreseeable and cumulative effect or significant impacts for the resource areas analyzed in this EA follow:

4.9.1 AICUZ

Proposed Action.

With the expectation of other work in the AICUZ area, it is possible that temporary and minor adverse hazards to the aircraft flight zone may occur. This is primarily related to temporary generation of smoke, steam, or dust because of the expected general construction activities. To mitigate the potential impact, project applicants will coordinate with the AICUZ Program administrators to ensure that the project is compatible with installation operations relative to these concerns. There is no concern of encroachment. Therefore, the proposed action is not anticipated to have a reasonably foreseeable or cumulative effect or significant impact to the AICUZ areas.

No Action Alternative.

With the No Action Alternative there would be no LMOC Master Node Facility development or related personnel or construction changes at JBLE-Langley and therefore, no impact.

4.9.2 Air Quality

Proposed Action.

Implementation of the Proposed Action would have short-term, negligible, adverse impacts to air quality primarily from general construction activity. Air emissions from general construction activities would be temporary and brief in duration. Air emissions are analyzed for reasonably foreseeable and cumulative effects, CEQ NEPA regulation update May 20, 2022 (Title 40 Code of Federal Regulations [CFR] §§ 1500–1508). The addition of the minor impacts to air quality from the general construction activity cumulatively is negligible. The proposed action is not anticipated to contribute to cumulative significant impacts to the air quality nor does it have a reasonably foreseeable relationship.

No Action Alternative.

Implementation of the No Action Alternative would have no significant impacts to regional or local air quality as existing conditions would remain the same.

4.9.3 Cultural Resources

It is not anticipated that the proposed action will have a reasonably foreseeable or cumulative effect or contribute to any impact on cultural resources. In addition to NEPA analysis, the cultural resources management (CRM) will review all proposed actions to identify those which may have an effect on cultural resources. The information gathered from the CRM review will also be used to determine the significance of impact as defined by NEPA.

No significant impacts to archeological or architectural resources are anticipated to have a reasonably foreseeable or cumulative effect of overlapping projects. Please see Section 106 consultation documentation in Appendix A.

LMOC Master Facility Node JBLE-Langley AFB, VA

No Action Alternative.

Implementation of the No Action Alternative would have no significant impacts on cultural resources as the area would remain in its current state.

4.9.4 Environmental Restoration Program

Proposed Action.

There will be no construction conducted on ERP sites that have current land use controls or any active investigation or clean-up activities. Site ST-27 southern border parallels Sweeney Boulevard to the north of the proposed LMOC Facility Node. However, the LMOC CCD considered this remediation area and after discussions with 633d CES, it was validated that there will be no environmental issues within the LMOC site. No cumulative effect will occur, and a reasonably foreseeable effect does not exist. No significant impact is anticipated.

No Action Alternative.

No significant impact will be experienced if the LMOC Master Node Facility is not built.

4.9.5 Transportation

Proposed Action.

Other project implementation may find benefits with the transportation changes planned for the proposed action which includes additional access roads. There will be no significant impact.

No Action Alternative.

No significant impact is anticipated if the status quo remains.

4.9.6 Infrastructure and Utilities

Proposed Action.

The LMOC CCD identifies two storm-water drainage lines running east-west north of Building 467 that would need to be diverted as a result of the proposed action to support the future LMOC. However, electric lines along Sweeney Boulevard will be avoided and used to support the new building. The improvements to the utilities are not anticipated to impact other planned projects, either adversely or as a result of having a reasonably foreseeable or cumulative effect in the future.

No Action Alternative.

There will be no significant impact if the status quo remains.

LMOC Master Facility Node JBLE-Langley AFB, VA

5.0 LIST OF PREPARERS

This EA has been prepared under the direction of the Air Force Civil Engineer Center, USAF, JBLE-Langley AFB.

The individuals that contributed to the preparation of this EA are listed below.

Table 5.1: List of Preparers

Name/Organization	Education	Resource Area	Years of Experience
Teresa Stephens, ERG	BA, Geography	All	25
Katie Watson, ERG	MS, Safety Management BS, Community Health and Environmental Safety	All	29

6.0 PERSONS AND AGENCIES CONSULTED/COORDINATED

The following approved and verified, by JBLE-Langley, Persons and Agencies were contacted in the preparation of this EA as they could possibly be impacted by the proposed actions.

Division of Organization if Necessary
ADDRESS>

Dear < name > :

The Department of the Air Force (Air Force) is issuing this letter to notify local, state and federal agencies of the intent to prepare an Environmental Assessment (EA) for a project associated with constructing a new Live Mission Operations Capability (LMOC) Master Node at Joint Base Langley-Eustis (JBLE-Langley), Virginia. The EA will be prepared in compliance with the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321-4347), the Council on Environmental Quality NEPA Implementing Regulations (40 CFR Parts 1500–1508) and Air Force Environmental Impact Analysis Process (EIAP) Air Force Instruction 32-7061 as promulgated at 32 CFR Part 989 to determine potential environmental effects of ISR Campus Area Development at JBLE-Langley.

This letter also serves to invite early public and agency participation in determining the scope of environmental issues and alternatives and whether to prepare an environmental impact statement (EIS) or a finding of no significant impact (FONSI). To effectively define the full range of issues and concerns to be evaluated in the EA, the Air Force is soliciting scoping comments from interested local, state and federal agencies, interested American Indian tribes, and interested members of the public. This also serves to provide early notice of compliance with Executive Order 11988, "Floodplain Management." State and federal regulatory agencies with special expertise in floodplains have been contacted to request comment.

The Proposed Action is needed to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions. It requires Sensitive Compartmentalized Information Facility (SCIF) areas, with both Special Access Program (SAP) and Top Secret/Sensitive Compartmentalized Information (TS/SCI) capabilities. Under this project, general construction and infrastructure improvement activities would occur. This includes construction of a new building, demolition of the credit union, building 467, park area demolition and construction, and the necessary improvements or replacement of affected utilities.

The LMOC Customer Concept Document (CCD) details the vision and goals and site analysis of 13 possible locations for the Proposed Action. Stakeholders participated in a collaborative workshop, and established a set of criteria used to select the site for the Proposed Action. Ultimately, the site selected and the design of the LMOC Master Node Facility was established. This facility will be used to support not only JBLE-Langley, but the Air Force throughout the United States—since a facility to support LMOC does not exist within the Air Force. The LMOC CCD identifies requirements for establishing the LMOC facility and considers the physical infrastructure, current and future mission and facility requirements, development constraints and opportunities, and land use relationships. The estimated footprint of this project is 7.26 acres. Within the project area, there are no wetlands, but the entire area falls within the 100-year floodplain. To comply with EO 11988, JBLE-Langley would design structures to reduce the risk of severe damage from flooding. Additionally, JBLE-Langley is heavily developed and provides minimal flood control for downriver areas. Therefore, the proposed project would not contribute to any measurable loss with regard to flood control capacity.

The EA will address potential environmental impacts from the proposed action and the range of reasonable alternatives, including a No-Action Alternative in which the proposed project would not be implemented. The EA will identify and evaluate potential impacts of all alternatives to land use, airspace, safety, noise, hazardous materials and solid waste, earth resources, water resources, air quality, cultural resources, biological resources, socioeconomics, and environmental justice.

Comments received by the Air Force during the scoping period and throughout the environmental process, will be considered in the preparation of the Draft EA. Scoping comments may be submitted to David Jennings by email at 633CES.CEIE.NEPAPublicComment@us.af.mil or by mail at 633 CES / CEIE, 37 Sweeney Blvd., JBLE-Langley, VA 23665.

Comments will be accepted at any time during the EA process. However, to ensure the Air Force has sufficient time to consider public input in the preparation of the Draft EA, scoping comments must be submitted within 30 days.

Sincerely

BRENDA W. COOK, DAFC Deputy Base Civil Engineer

LMOC Master Facility Node JBLE-Langley AFB, VA

PUBLIC NOTICE POTENTIAL TO IMPACT FLOODPLAINS AND WETLANDS, JOINT BASE LANGLEY-EUSTIS, LANGLEY AIR FORCE BASE, VIRGINIA

The Department of the Air Force (Air Force) is preparing an Environmental Assessment (EA) for a project associated with the proposed Intelligence, Surveillance, Reconnaissance (ISR) Campus Area Development Plan (ADP) at Joint Base Langley-Eustis (JBLE-Langley), Virginia. The project identified in the EA is subject to Executive Order (EQ) 11998, Floodplain Management, and EO 11990, Protection of Wetlands. This notice complies with sections 2(a)(d) of EO 11988 and sections 2(a)(d) of EO 11988 and sections 2(a)(d) of EO 11989. The Proposed Action is to further develop the ISR Campus Area to support ISR activities and address planning needs for organizations throughout the installation. The ISR campus will consolidate cyber functions on the installation and allow for an advancing, mixed-use development for the entire installation. Under this project, general construction and infrastructure improvement activities would occur. This includes construction of new buildings, demolition activities, road and parking lot improvements or construction, and necessary improvements or replacement of affected utilities.

The ISR Campus ADP is necessary to provide infrastructure improvements for the improvement of the physical infrastructure and functionality of JBLE-Langley, including current and future mission and facility requirements, development contamits and opportunities, and land use relationships. The estimated footprint of this project is 156 acres. Within the project area, there are approximately 17 acres of wetlands, 130 acres in the 500-year floodplain, and 23 acres in the 500-year floodplain, and 23 acres in the 500-year floodplain. To comply with EO 11988, JBLE-Langley would design structures to reduce the risk of severe damage from flooding, Additionally, JBLE-Langley is heavily developed and provides minimal flood control for downriver areas. Therefore, the proposad project would not contribute within the project area. Loss of wet-land acreage would likely require a U.S. Army Corps of Engineers Clean Water Act (CWA) Section 404(b) per-

Water Act (CWA) Section 404(b) permit.

The EA will address potential environmental impacts from the proposed action and the range of reasonable alternatives, including a No-Action Alternative in which the proposed project would not be implemented. The EA will be prepared in compliance with the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321-4347), the Council on Environmental Quality NEPA Implementing Regulations (40 CFR parts 1500–1508) and Air Force Environmental Impact Analysis Process (EIAP) Air Force Instruction 32-7061 as promulgated at 32 CFR part 989 to determine potential environmental effects of ISR Campus

FINAL ENVIRONMENTAL ASSESSMENT

Environmental Assessment Appendix A

LMOC Master Facility Node JBLE-Langley AFB, VA

Area Development at JDLE-Langley. The EA will serve as the basis for deciding whether the proposed action would result in a significant impact to the human environment, requiring the preparation of an environmental impact statement (EIS), or whether no significant impacts would occur, in which case a finding of no significant impact (FONSI) would be appropriate. The Air Force requests advance public comment to determine if there are any public concerns regarding the project's potential to impact floodplains and weltands. The proposed project will be analyzed in a forthcoming EA and the public will have the opportunity to comment on the draft EA when it is released. Please submit comments or requests by June 18, 2021 to David Jennings by email at 633CES CEIE.NEPAPublicComment@us.af.mil or by mail at 633 CES / CEIE, 37 Sweeney Blvd., Langley AFB, VA 23665.

PUBLIC NOTICE

JOINT BASE LANGLEY-EUSTIS (JBLE), VIRGINIA

The Department of the Air Force (AF) is preparing an Environmental Assessment (EA) to analyze the impacts of constructing the proposed Live Mission Operations Capability Master Node Facility (LMOC) at Joint Base Langley-Eustis (JBLE-Langley), Virginia. The proposed action identified in the EA is subject to Executive Order (EO) 11988, Floodplain Management.

LMOC will support specific mission needs, including administrative functions. The LMOC will also be used as a prototype to support the AF throughout the U.S.

The EA, prepared in accordance with the National Environmental Policy Act (NEPA) and AF instructions, evaluates potential environmental impacts of the alternative actions. The proposed action (PA) area is approximately 7.25 acres of which 5.65 acres are in the 100-year floodplain and 1.60 acres are in the 500-year floodplain. The PA area is in a developed area providing minimal flood control for downriver areas. The PA design will reduce the risk of severe damage from flooding. The PA would not contribute to any measurable loss with regard to flood control capacity. The analysis supports a proposed Finding of No Significant Impact (FONSI) and Finding of No Practicable Alternative (FONPA) for LMOC construction.

The Draft FONSI, FONPA, and EA are available for public review in the Public Notices section of the JBLE-Langley web page at: https://www.jble.af.mil/About-Us/Units/Langley-AFB/Langley-Environmental/.

You are encouraged to submit written comments through *Thursday, March 23*. Written comments should be provided to 633 CES / CEIE, 37 Sweeney Blvd., Langley AFB, VA 23665. Email comments may be sent to: 633CES.CEIE.NEPAPublicComment@us.af.mil

PUBLIC NOTICE JOINT BASE LANGLEY-EUSTIS (JBLE), VIRGINIA

The Department of the Air Force (AF) is preparing an Environmental Assessment (EA) to analyze the impacts of constructing the proposed Live Mission Operations Capability Master Node Facility (LMOC) at Joint Base Langley-Eustis (BIEL-Langley), Yigrinia. The proposed action identified in the EA is subject to Executive Order (EO) 11988, Floodplain Management. LMOC will support specific mission needs, including administrative functions. The LMOC will also be used as a prototype to support the AF throughout the U.S. LMCC will also be used as a prototype to support the AF throughout the U.S. The EA, prepared in accordance with the National Environmental Policy Act (NEPA) and AF instructions, evaluates potential environmental impacts of the alternative actions. The proposed action (PA) area is approximately 7.25 acres of which 5.65 acres are in the 100-year floodplain and 1.60 acres are in the 500-year floodplain. The PA area is in a developed area providing minimal flood control for downriver areas. The PA design will reduce the risk of severe damage from flooding. The PA would not contribute to any measurable loss with regard to flood control capacity. The analysis supports a proposed Finding of No Significant Impact (FONS) and Finding of No Practicable Alternative (FONPA) for LMCC construction.

The Draft FONSI, FONPA, and EA are available for public review in the Public Notices section of the JBLE-Langley web page at: https://www.jble.af.mil/About-Us/Units/Langley-AFB/Langley-Environmental/.

You are encouraged to submit written comments through *Thursday, March* 23. Written comments should be provided to 633 CES / CEIE, 37 Sweeney Blvd., Langley AFB, VA 2365. Ernail comments may be sent to: 633CES.CEIE.NEPAPublicComment@us.af.mil

Questions? Please contact Ms. Sherry Johnson: 633CES.CEIE.NEPAPublicComment@us.af.mll

Project Code: 2023-0080134

Project Name: JBLE-Langley LMOC Master Facility Node Construction

Subject: List of threatened and endangered species that may occur in your proposed project

location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 et seq.). Any activity proposed on National Wildlife Refuge lands must undergo a 'Compatibility Determination' conducted by the Refuge, Please contact the individual Refuges to discuss any questions or concerns.

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seg.), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

05/10/2023 2

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2) (c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/birds/policies-and-regulations.php.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php.

In addition to MBTA and BGEPA, Executive Order 13186: Responsibilities of Federal Agencies to Protect Migratory Birds, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Project Code in the header of this

05/10/2023 3 letter with any request for consultation or correspondence about your project that you submit to our office. Attachment(s): Official Species List • USFWS National Wildlife Refuges and Fish Hatcheries Migratory Birds

05/10/2023

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Virginia Ecological Services Field Office 6669 Short Lane Gloucester, VA 23061-4410 (804) 693-6694 05/10/2023

PROJECT SUMMARY

Project Code: 2023-0080134

Project Name: JBLE-Langley LMOC Master Facility Node Construction

Project Type: Military Development

Project Description: Under this project, general construction, infrastructure improvement, and

building and park area demolition activities would occur to support the development of the LMOC Master Node Facility. The new building would be constructed to be above the known flood zone in an already

built-up area.

Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@37.07612615,-76.35097077250649,14z

Counties: Hampton County, Virginia

05/10/2023

ENDANGERED SPECIES ACT SPECIES

There is a total of 3 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an
office of the National Oceanic and Atmospheric Administration within the Department of
Commerce.

MAMMALS

NAME.	STATUS
Northern Long-eared Bat Myotis septentrionalis No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Endangered
Tricolored Bat <i>Perimyotis subflavus</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered
INSECTS NAME	STATUS
Monarch Butterfly Danaus plexippus No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

USFWS NATIONAL WILDLIFE REFUGE LANDS AND FISH HATCHERIES

Any activity proposed on lands managed by the <u>National Wildlife Refuge</u> system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

and Alaska.

BREEDING NAME SEASON Black Skimmer Rynchops niger Breeds May 20 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA to Sep 15 and Alaska. https://ecos.fws.gov/ecp/species/5234 Black-billed Cuckoo Coccyzus erythropthalmus Breeds May 15 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA to Oct 10 and Alaska. https://ecos.fws.gov/ecp/species/9399 Blue-winged Warbler Vermivora pinus Breeds May 1 to This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions Jun 30 (BCRs) in the continental USA Bobolink Dolichonyx oryzivorus Breeds May 20 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA to Jul 31 and Alaska. Canada Warbler Cardellina canadensis Breeds May 20 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA to Aug 10 and Alaska. Chimney Swift Chaetura pelagica Breeds Mar 15 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA to Aug 25 and Alaska. Gull-billed Tern Gelochelidon nilotica Breeds May 1 to This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA Jul 31 and Alaska. https://ecos.fws.gov/ecp/species/9501 Hudsonian Godwit Limosa haemastica Breeds This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA elsewhere and Alaska. Prothonotary Warbler Protonotaria citrea Breeds Apr 1 to This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA Jul 31 and Alaska. Purple Sandpiper Calidris maritima Breeds This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA elsewhere

2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (*)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (1)

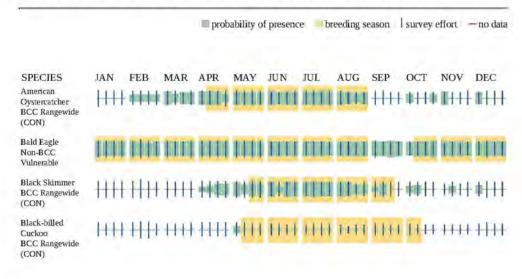

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

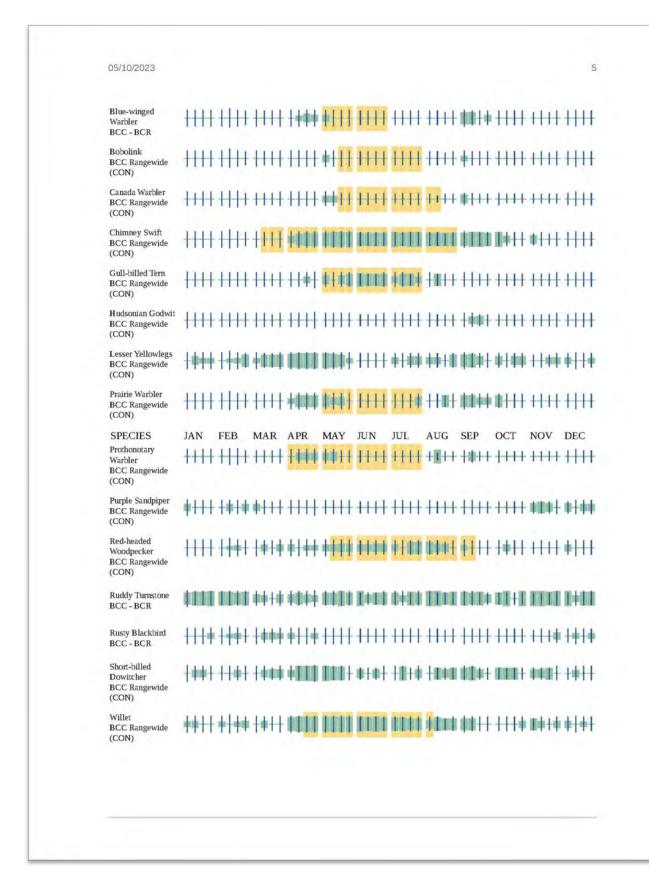

No Data (-)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

3

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

MIGRATORY BIRDS FAO

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS <u>Birds of Conservation Concern</u> (<u>BCC</u>) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

NAME	BREEDING SEASON
Red-headed Woodpecker Melanerpes erythrocephalus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Ruddy Turnstone Arenaria interpres morinella This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds elsewhere
Rusty Blackbird <i>Euphagus carolinus</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds elsewhere
Short-billed Dowitcher Limnodromus griseus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Willet Tringa semipalmata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 20 to Aug 5
Wood Thrush Hylocichla mustelina This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Aug 31

PROBABILITY OF PRESENCE SUMMARY

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (III)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

The probability of presence for each week is calculated as the number of survey events in
the week where the species was detected divided by the total number of survey events for
that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee
was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is
0.25.

MIGRATORY BIRDS

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described <u>below</u>.

- 1. The Migratory Birds Treaty Act of 1918.
- 2. The Bald and Golden Eagle Protection Act of 1940.
- 3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Oystercatcher Haematopus palliatus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8935	Breeds Apr 15 to Aug 31
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.	Breeds Oct 15 to Aug 31

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the <u>Diving Bird Study</u> and the <u>nanotag studies</u> or contact <u>Caleb Spiegel</u> or <u>Pam Loring</u>.

What if I have eagles on my list?

07/05/2021

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

The probability of presence graphs associated with your migratory bird list are based on data provided by the <u>Avian Knowledge Network (AKN)</u>. This data is derived from a growing collection of <u>survey</u>, <u>banding</u>, and <u>citizen science datasets</u>.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the <u>RAIL Tool</u> and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

- "BCC Rangewide" birds are <u>Birds of Conservation Concern</u> (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
- "BCC BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
- 3. "Non-BCC Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the <u>Eagle Act</u> requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

APPENDIX C

Air Pollutant Emissions Calculations

C.1 INTRODUCTION

This air analysis provides estimated emissions for the proposed action at JBLE-Langley. Use of the ACAM model was implemented and the demolition, paving, and construction technologies were run. The model parameters were derived by referencing the LMOC Customer Concept Document (CCD) [Urban Collaborative, 2020]. The preferred alternative, alternative 1, was estimated to begin in the short term and was therefore set to a 9-month duration beginning in 2023.

Emissions were calculated for the National Ambient Air Quality Standards within the Hampton Roads Intrastate (HRI) Air Quality Control Region (AQCR) for nitrogen oxides (NOx), volatile organic compounds (VOCs), carbon monoxide (CO), sulfur dioxide (SO2), particulate matter measured as less than or equal to 2.5 microns in diameter (PM2.5), and particulate matter measured as less than or equal to 10 microns in diameter (PM10). Estimated Greenhouse Gas (GHG) emissions were also calculated and compared to the Council of Environmental Quality (CEQ) reference point of 25,000 metric tons per year (tpy).

The analysis was performed for construction periods during which paving, demolition, and building construction activities were accounted for concerning the proposed action. It should be noted that these calculations only account for mobile emissions and exclude stationary emissions sources such as boiler and generator equipment as this data was not available during the time of the analysis. Operation emissions were also not calculated because this type of data was not available during the time of the analysis. The paving activity is based on the use of asphalt because that is the technology associated with the ACAM model. The ACAM model version 5.0.17b was used to support this estimate.

The ACAM summary report follows.

C-2 May 2023

AIR CONFORMITY APPLICABILITY MODEL REPORT RECORD OF CONFORMITY ANALYSIS (ROCA)

1. General Information: The Air Force's Air Conformity Applicability Model (ACAM) was used to perform an analysis to assess the potential air quality impact/s associated with the action in accordance with the Air Force Manual 32-7002, Environmental Compliance and Pollution Prevention; the Environmental Impact Analysis Process (EIAP, 32 CFR 989); and the General Conformity Rule (GCR, 40 CFR 93 Subpart B). This report provides a summary of the ACAM analysis.

a. Action Location:

Base: LANGLEY AFB

State: Virginia **County(s):** York

Regulatory Area(s): Norfolk-Virginia Beach-Newport News (Hampton Roads), VA

- b. Action Title: Live Mission Operations Capability (LMOC) Master Node Facility Construction
- c. Project Number/s (if applicable):
- d. Projected Action Start Date: 1 / 2023
- e. Action Description:

The Proposed Action is to construct an LMOC Master Node Facility. This general construction project evaluates project alternatives separately. This project is based on the anticipated activities as outlined in the LMOC CCD (Urban Collaborative, 2020), which includes initiatives for facility construction; infrastructure improvements and construction; and demolition.

Planning initiatives and site analysis detailed in the JBLE LMOC Customer Concept Document (CCD) (Urban Collaborative, 2020), evaluated 13 separate locations for siting the LMOC. Of the 13 sites evaluated, the flightline-side course of action (COA), Site 4, was selected as the preferred alternative (Urban Collaborative, 2020). The other 12 alternate locations were removed from further consideration. Leaving the Proposed Action (preferred alternative) or the No Action Alternative.

2. Analysis: Total combined direct and indirect emissions associated with the action were estimated through ACAM on a calendar-year basis for the "worst-case" and "steady state" (net gain/loss upon action fully implemented) emissions. General Conformity under the Clean Air Act, Section 1.76 has been evaluated for the action described above according to the requirements of 40 CFR 93, Subpart B.

Based on the analysis, the requirements of this rule are:	applicable
	X not applicable

Conformity Analysis Summary:

2023

Pollutant	Action Emissions	GENERAL CONFORMITY		
	(ton/yr)	Threshold (ton/yr) Exceedance (Ye		
Norfolk-Virginia Beach-Newport News (Hampton Roads), VA				
VOC	0.525	100	No	

C-3 May 2023

AIR CONFORMITY APPLICABILITY MODEL REPORT RECORD OF CONFORMITY ANALYSIS (ROCA)

NOx	3.048	100	No
CO	4.020		
SOx	0.008		
PM 10	0.140		
PM 2.5	0.138		
Pb	0.000		
NH3	0.003		
CO2e	749.7		

2024 - (Steady State)

Pollutant	Action Emissions	GENERAL CONFORMITY			
	(ton/yr)	Threshold (ton/yr)	Exceedance (Yes or No)		
Norfolk-Virginia Beach-Ne	wport News (Hampton Roads	s), VA			
VOC	0.000	100	No		
NOx	0.000	100	No		
CO	0.000				
SOx	0.000				
PM 10	0.000				
PM 2.5	0.000				
Pb	0.000				
NH3	0.000				
CO2e	0.0				

None of estimated emissions associated with this action are above the conformity threshold values established at 40 CFR 93.153 (b); Therefore, the requirements of the General Conformity Rule are not applicable.

Teresa A. Stephens, Contractor

C-4

May 2023

1. General Information

- Action Location

Base: LANGLEY AFB **State:** Virginia

County(s): York

Regulatory Area(s): Norfolk-Virginia Beach-Newport News (Hampton Roads), VA

- Action Title: Live Mission Operations Capability (LMOC) Master Node Facility Construction

- Project Number/s (if applicable):

- Projected Action Start Date: 1 / 2023

- Action Purpose and Need:

The purpose of the LMOC Facility is to support exercise mission planning, execution, monitoring, and debriefing, as well as administrative functions.

The need for an LMOC Master Node Facility is because a facility is needed to support JBLE-Langley's Live Mission Operation Capabilities and it can further be used as a prototype for other LMOC Master Node Facilities to support the Air Force throughout the US, since no LMOC facilities currently exist in the US.

- Action Description:

The Proposed Action is to construct an LMOC Master Node Facility. This general construction project evaluates project alternatives separately. This project is based on the anticipated activities as outlined in the LMOC CCD (Urban Collaborative, 2020), which includes initiatives for facility construction; infrastructure improvements and construction; and demolition.

Planning initiatives and site analysis detailed in the JBLE LMOC Customer Concept Document (CCD) (Urban Collaborative, 2020), evaluated 13 separate locations for siting the LMOC. Of the 13 sites evaluated, the flightline-side course of action (COA), Site 4, was selected as the preferred alternative (Urban Collaborative, 2020). The other 12 alternate locations were removed from further consideration. Leaving the Proposed Action (preferred alternative) or the No Action Alternative.

- Point of Contact

Name: Teresa A. Stephens

Title: Contractor **Organization:** ERG LLC

Email: teresa.stephens@envrg.com

Phone Number: 844-374-9675

- Activity List:

Activity Type		Activity Title	
2.	Construction / Demolition	LMOC Master Node Facility Construction	

Emission factors and air emission estimating methods come from the United States Air Force's Air Emissions Guide for Air Force Stationary Sources, Air Emissions Guide for Air Force Mobile Sources, and Air Emissions Guide for Air Force Transitory Sources.

2. Construction / Demolition

2.1 General Information & Timeline Assumptions

C-5 May 2023

- Activity Location

County: York

Regulatory Area(s): Norfolk-Virginia Beach-Newport News (Hampton Roads), VA

- Activity Title: LMOC Master Node Facility Construction

- Activity Description:

To construct the LMOC Master Node Facility, Building 467 will be demolished, the LMOC facility will be constructed, 181 parking spaces will be constructed, and roads within the LMOC facility will be constructed.

- Activity Start Date

Start Month: 1 **Start Month:** 2023

- Activity End Date

Indefinite: False End Month: 9 End Month: 2023

- Activity Emissions:

Pollutant	Total Emissions (TONs)
VOC	0.524872
SO_x	0.007702
NO _x	3.047532
CO	4.020080
PM 10	0.140085

Pollutant	Total Emissions (TONs)
PM 2.5	0.138264
Pb	0.000000
NH ₃	0.003010
CO ₂ e	749.7
